

Federal Agency for
Cartography and Geodesy

Third High Level Forum on UN-GGIM

Session 1: Geospatial Information for the Post-
2015 Development Agenda

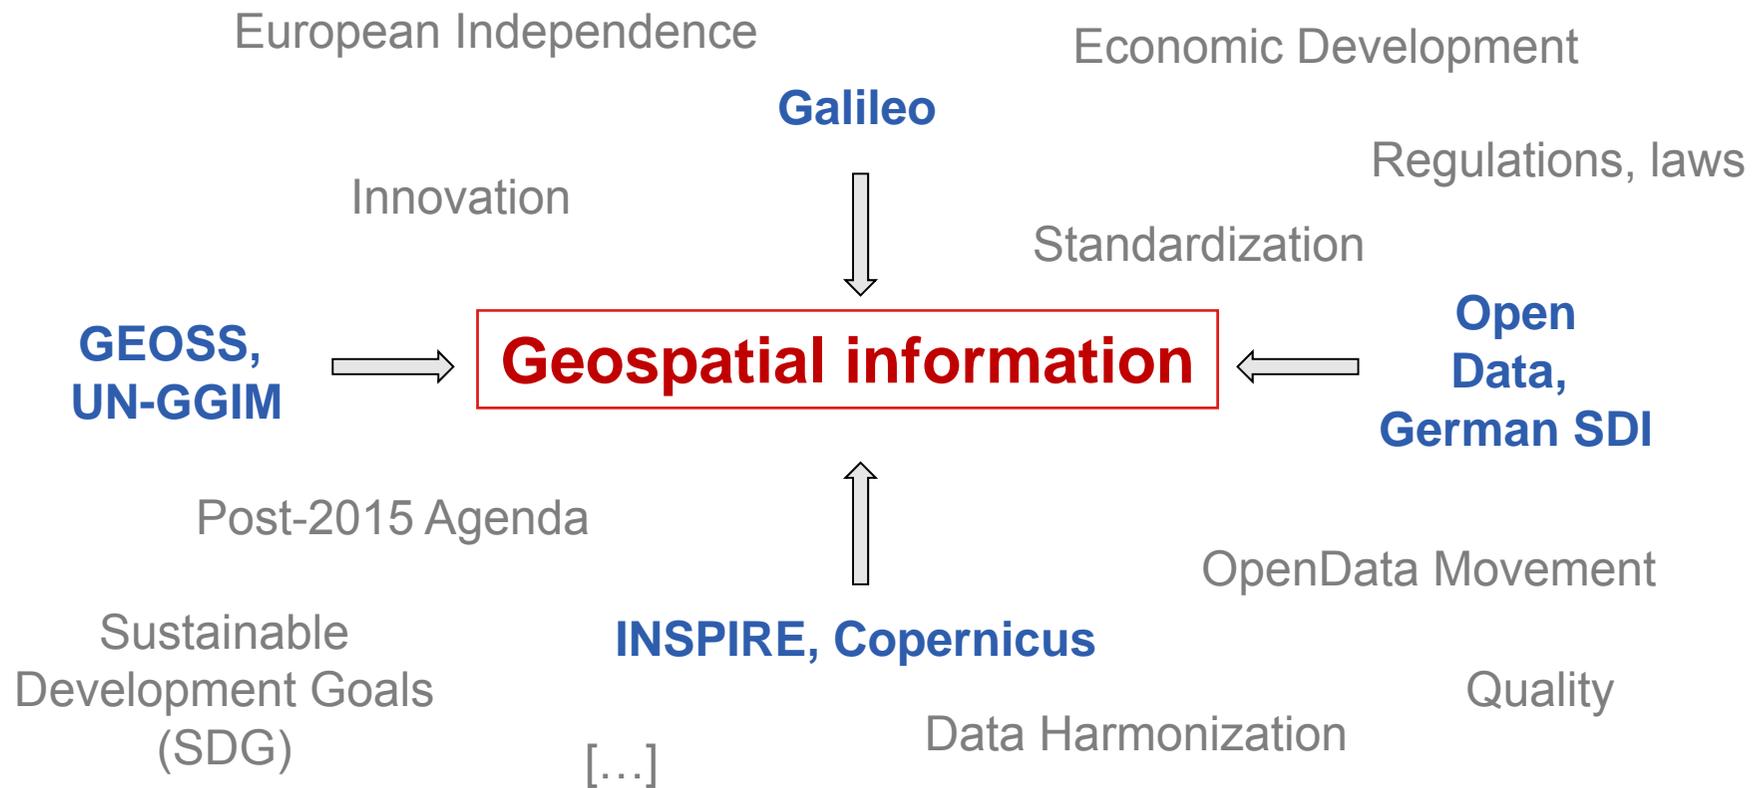

Local to National Perspectives

Germany

Challenges

National and International Context (for Europe)

Challenges

Guidelines of Action in Geospatial information

Guidelines of Action

Expand quality and quantity of the geodata offering

Create added values through open data (Open Data)

Promote international und national networking of geodata

Strengthen control and coordination in Germany

**Recommendations
from the 3rd Geo
Progress Report of the
Federal Government of
Germany**

Solutions

Germany: set out a National Geospatial Strategy

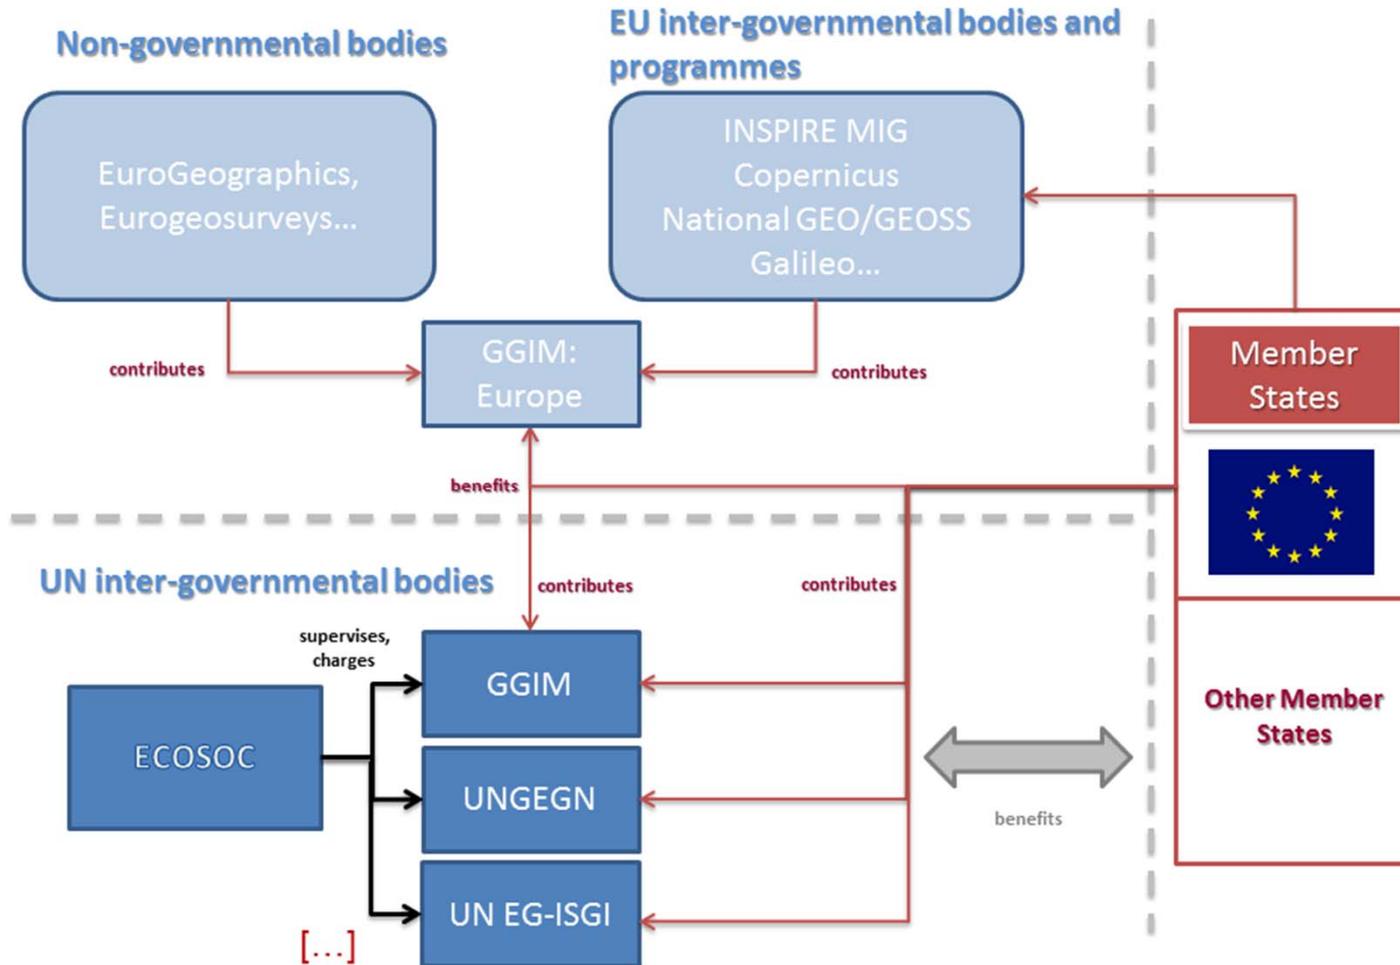

- The National geospatial strategy is needed and requested by the public, the economy and the research
- Involvement of all federal levels (Federal Government, Laender, municipalities), Open Communities, research and economy
- 3rd Geo Progress Report of the Federal Government provides a frame for the strategy
- Strategy 1.0 to be ready for consultations mid 2015

Solutions

Europe: better coordination through UN-GGIM: Europe

Sustainable Development Goals (SDG),
Post-2015 Agenda

Vision

5 messages to convey

A public infrastructure for geospatial information...

- is a fundamental service task in the general interest for any national state,
- is an indispensable rationale for spatial referencing and for any use geospatial data in the public sector,
- reflects and considers primarily user needs,
- promotes innovation and technical progress,
- is established at different levels, but embedded into the national administrative levels and departments as well as into the European and international frame.

... supporting Sustainable Development Goals (SDG) & Post-2015 Agenda

Comprehensive legal, technical, scientific, organizational and financial foundations are needed (dimensionality ⇒ complexity)

Thank you for your kind attention!
