

Chris Rizos (IAG), Chair

William Cartwright (ICA), immediate past Chair

- Global Spatial Data Infrastructure (GSDI) Association
- IEEE Geoscience & Remote Sensing Society (IEEE-GRSS)
- International Association of Geodesy (IAG)
- International Cartographic Association (ICA)
- International Federation of Surveyors (FIG)
- International Geographical Union (IGU)
- International Hydrographic Organization (IHO)
- International Map Industry Association (IMIA)
- International Society of Photogrammetry & Remote Sensing (ISPRS)
- International Steering Committee for Global Mapping (ISCGM)

- Organizations of JB GIS
 - Speak for the broad disciplines of geospatial information sciences, industries, professions & applications, at the International Level
 - Where necessary engage in joint activities
 - Contribute to the UN-GGIM initiative both as a grouping & as individual organizations

Individual organization reports

- Conferences, seminars, publications, etc
- Outreach activities, workshops, capacity building, etc
- Advocacy activities
- Membership issues
- Project progress status
- Discipline & technology trends, etc

International Map Year 2015/16

International Cartographic Association
Association Cartographique Internationale

How can we unleash the potential of
geospatial information?

How can we make sure that geospatial data is really **applicable for governments, for decision makers, for planners, for citizens** through applications, products, and systems, which are easy to use and efficiently support the human user?

International Cartographic Association
Association Cartographique Internationale

Maps and Cartography are key.

International Cartographic Association
Association Cartographique Internationale

International Map Year 2015/16

The main purpose of the International Map Year (IMY), to be launched at the 28th International Cartographic Conference in Rio de Janeiro in August 2015, is **to expose the importance of maps and geographic information in human society.**

International Cartographic Association

International Map Year 2015

The United Nations Regional Cartographic Conference (UNRCC) in Bangkok in October 2012 adopted a resolution stating that, on behalf of UNRCC, the International Cartographic Association (ICA) should organise the International Map Year 2015.

International Cartographic Association
Association Cartographique Internationale

What is the International Map Year?

- IMY is a worldwide celebration of maps and their unique role in our world.
- IMY provides opportunities to demonstrate, follow, and get involved in the art, science and technology of making and using maps and geographic information.
- ICA expects that all its members (about 80 member nations worldwide) will participate in order to give each citizen a broader knowledge of geoinformation and maps.

International Cartographic Association
Association Cartographique Internationale

What are the specific purposes of IMY?

- make maps more visible to citizens in a global context
- give all an opportunity to learn more about associated geospatial sciences
- show how maps can be used in society
- encourage all to experience how information technology can be used in acquiring and handling geographic information, and how it is possible to produce one's own maps
- demonstrate the necessity of a sustainable development of geographic information infrastructures.

International Cartographic Association
Association Cartographique Internationale

What are the specific purposes of IMY?

IMY activities will focus on children and the general public, but also involve professionals and government agencies,

International Cartographic Association
Association Cartographique Internationale

Why an endorsement of UN-GGIM?

- to provide recognition by UN and its entities and Member States of the importance of maps and geospatial information
- to ask Member States to encourage NMAs and relevant government offices to take part in IMY
- to motivate member states to improve the overall knowledge of the general public in how to use maps and geospatial information
- to provide recognition among geospatial professionals and local governments on the status of their work.
