

Breakouts

UN-GGIM

United Nations Secretariat
Global Geospatial Information Management

Positioning geospatial information to address global challenges

ggim.un.org

Each Group has:

- Goals, targets and indicators for a selection of SDGs
- Those indicators which the IAEG-SDG WGGI think can benefit from geospatial data are indicated in pink and blue
- Sheets of data theme stickers

Each Group will:

- Discuss which data themes are relevant to the indicators - no need to confine yourselves to the pink and blue ones.
- Consider what datasets will be required – write on sheet
- Consider what is missing regionally and in your country
- What sources might you use?
