

## **Committee of Experts on Global Geospatial Information Management**

### **Tenth session**

New York, 26- 27 August 2020 and 4 September 2020

Item 3 of the agenda

### **Strengthening of geospatial information management (for discussion and decision)**

<i>Statement provided by:</i> Colombia	
<i>Statement:</i> Colombia welcomes the report of the working group and will continue developing the efforts to strengthen geospatial information in the production and dissemination of statistical information. Accordingly, we will guarantee the availability of statistic information to the general public and recommend the implementation and adaptation to the National Government.  We recognize the importance of the third edition of the document "Future trends in geospatial information management". This document constitutes a guide that marks the beginning of an important decade for the sustainable development and management of geospatial information at the local and national level.  Colombia has promoted its efforts to respond to the coronavirus disease (COVID-19) pandemic through generating a geo-viewer to monitoring the Vulnerability Index that allows knowing where the population is located, according to their demographic characteristics and health condition.
