

# Committee of Experts on Global Geospatial Information Management

## Tenth session

New York, 26- 27 August 2020 and 4 September 2020

Item 9 of the agenda

### Application of geospatial information related to land administration and management (for discussion and decision)

<i>Statement provided by:</i> Colombia	
<i>Statement:</i> Colombia recognizes the importance of the decisions made by the Committee of Experts to strengthen actions related to land management.  Colombia has begun to work towards optimal land administration through the implementation of a multipurpose local cadastre public policy. This includes the adoption of the Integrated Geospatial Information Framework, the development of the SDI as a mechanism to integrate information and the use of technologies as primary resources to facilitate the production and provision of related information.  The goals have been set regarding the updating of the cadastral bases, interoperability of cadastre-registry and management of geographic information from the land registry related to rights, restrictions and responsibilities as a starting point and contribution to the land administration.
