

# **GEOSTAT – Projects on the Integration of Statistical and Geospatial Information in Europe**

UN-GGIM #8 - Side event EG - Integration of Statistical and Geospatial Information/Open Geospatial Consortium

**Ekkehard PETRI, Eurostat** 

## Aim of this presentation

- Quick introduction to the European Statistical System
- History and goals of GEOSTAT
- Some results and links to the Statistical Geospatial Framework
- Future Work

### The European Statistical System

Institutional partnership between Eurostat and the national statistical authorities

Member states collect and process the national data

Eurostat processes the received data and disseminates European official statistics

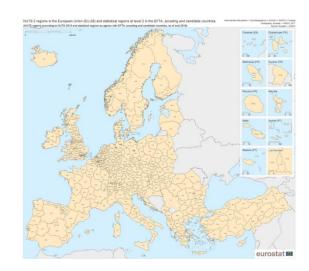

### Working principle of the ESS

#### **Comparable national statistics by**

- harmonisation of production processes
- Methodologies
- output geographies

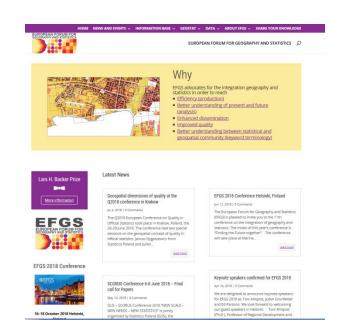

## EUROPEAN FORUM FOR GEOGRAPHY AND STATISTICS

## The European Forum for Geography and Statistics EFGS

- Voluntary network of geospatial experts in Statistical Offices
- Reference group for methodological work on the integration of statistics and geospatial information in the EU
- Origin of GEOSTAT
- Focus on networking and information sharing in the ESS and globally
- Annual EFGS conferences

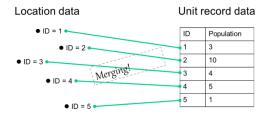

- 11<sup>th</sup> conference of the European Forum for Geography and Statistics will be held in Helsinki 16-18 October, 2018
- We kindly invite you to participate
- The conference website is open <u>www.efgs2018.fi</u>
- This website will give you all information about the conference
- Deadline for registration and submission of abstracts is 17 August 2018

### **GEOSTAT** work plan

- Develop a methodology for the integration of geospatial information into statistical production
- Make geospatial information management a routine task in the production of official statistics
- Design geospatial statistics products to increase the relevance of official statistics

Specify Niecos	Design	Butt	Colect	Process	Analyse	Deserrate	Distante
11 torife medi	21 Deeps orquin	33 build collection enchange channel	A3 Create Flame and soled sample	Nageli Ara	fig Proper dielt regions	21 Spikes copie: systems	S.1 Gether-evaluation reputs

15 Prepare and autinol bosoliuse case	2.0 Design production systems and workfow	35 Security and the second sec		55 Calculate weights			
		17 Featur poduction system		S.7 Calculate segregates			

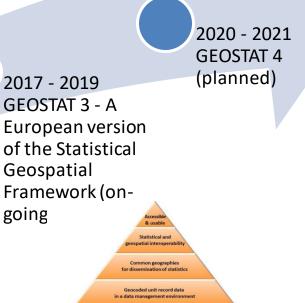

## **GEOSTAT** projects - evolution

2015 - 2017 GEOSTAT 2 - point based geocoding infrastructure for statistics (completed)

2010 - 2014 GEOSTAT 1 - EU wide population grid (completed)

## **GEOSTAT** working method

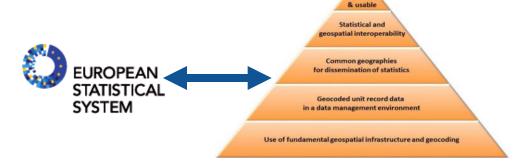

© Picture: Ferran Pestaña (Lizenz: CC BY-SA 2.0)

**Scope of GEOSTAT 3** 

- 8 NSOs, led by Sweden
- Adapt SGF to Europe
- Harmonise geospatial information management between NSOs
- Define responsibilities of NMCAs -> UN-GGIM: Europe
- Test the implementation of SGF on statistical products
  => Produce SDG indicators (more flexible than EU statistical products)

#### SDG indicators tested in GEOSTAT 3

11.2.1 Proportion of population that has convenient access to public transport, by sex, age and persons with disabilities

11.3.1 Ratio of land consumption rate to population growth rate

11.7.1 Average share of the built-up area of cities that is open space for public use by all, by sex, age and persons with disabilities

#### Still a lot to do ...

#### Institutions

Legislation on geocoding

Institutional agreements between Statistical and Geospatial Authorities

Governance for the SGF

#### Methodology

Full development of the SGF

Integration into the statistical quality framework

Full integration of geospatial information management into business processes, enterprise architectures, information models, information exchange standards

Recognition of SGF as a statistical methodology

## Capacity building

Training plans and recruitment policies

#### **Products**

Geo-enable more statistics

Design further geospatial statistics products

Stimulate user demand

## That's why Eurostat proposes GEOSTAT 4 (2020-2022)

## Completed SGF for the ESS

- Fill gaps and provide detailed implementation guidance
- Draft ESS methodological document
- Prepare training material

## SGF in operation in all NSIs

- Inventory on geocoding in statistical production
- Focus on surveys and business registers
- National/EU action plans for SGF implementation/geocoding
- Plans for further geospatial statistics

## Geospatial quality assessment

- Develop specific geospatial quality targets and indicators
- Integrate into existing quality tools of the ESS

## **Summary GEOSTAT and the SGF**

A Point-based Foundation for Statistics - Final Report from the GEOSTAT 2 Project

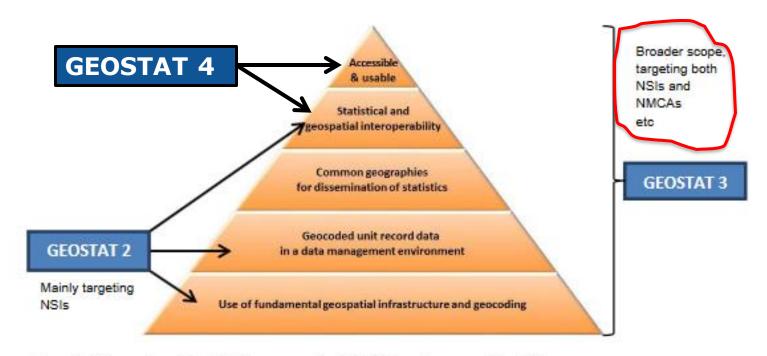

Figure 3: Illustration of the link between the GEOSTAT projects and the SGF.

## Related effort: access for NSOs to fundamental geospatial data and services

Icons for the global fundamental geospatial data themes

Land Parcels

Physical Infrastructure

Population Distribution

Orthoimagery

Transport Networks

Water

## Discussion on SGF governance

- What will be the role of the SGF in statistical production?
- Who will be the owner/steward of the SGF?
- Implementation plan
- Role of the Regions?
