EuroGeographics Members

• Are key players in developing the specifications for and the practical implementations of the European Spatial Data Infrastructure (INSPIRE);

• Engage actively and constructively in the development of European legislation, for example in the revision of the directive on the Re-use of Public Sector Information;

• Provide practical support to European programmes such as Global Monitoring for Environment and Security (GMES) willingly making their reference data available in the European Emergency Management Service;

• Contribute their knowledge and Experience to each other to deliver their national responsibilities more effectively and at lower cost
Delivering pan-European harmonised datasets

Developing Data as a Service solutions
Eurostat and ESS

• Eurostat is the statistical office of the European Union situated in Luxembourg. Its task is to provide the European Union with statistics at European level that enable comparisons between countries and regions.

The ESS is the partnership between the Community Statistical Authority, (Eurostat), and the National Statistical Institutes (NSIs) and other national authorities responsible in each Member State for the development, production and dissemination of European statistics. This Partnership also includes the EEA and EFTA countries.
GISCO the forum which brings the European Commission, National Statistical bodies and the European National Mapping, Cadastre and Land Registry authorities together.

GISCO (the Geographical Information System at the COMmission),

GISCO, a Eurostat service which promotes and stimulates the use of GIS within the European Statistical System and the Commission.

It is responsible for the management and dissemination of the Geographical reference database of the Commission. It produces maps, spatial analysis, promotes geo-referencing of statistics and provides user support for Commission users of GIS.

GISCO is one of the leaders of the INSPIRE initiative, supporting the implementation of the directive for the establishment of a European Spatial Data Infrastructure.
Statistics and Geo-Information

Proved the concept, now we have started to deliver the European Location Framework - a technical infrastructure which delivers authoritative, interoperable, cross-border geospatial reference data for analysing and understanding information connected to places and features.
To bring geo-information and statistics closer together

Thank you!
