

Geospatial Innovation – Science and Technology

20 November, 2018

Data is Growing at Amazing Space.....

GeoSpatial Data Lake - Introducing

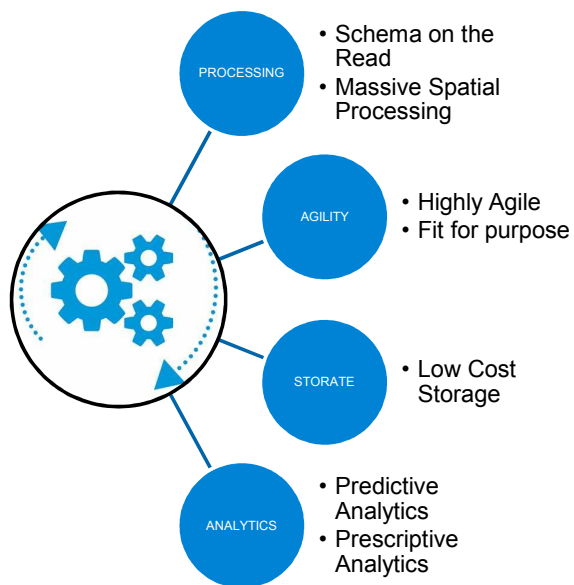

Large amount of Spatial Data –
Imagery, Vector, Drone Feeds,
LIDAR,

➔ Injest all data

Variety of Information
embedded - Structured Data,
Semi Structured and Raw Data

➔ Store in native format

Mobile data feeds, Vehicle
data, Variety of IoT/sensors
data

3

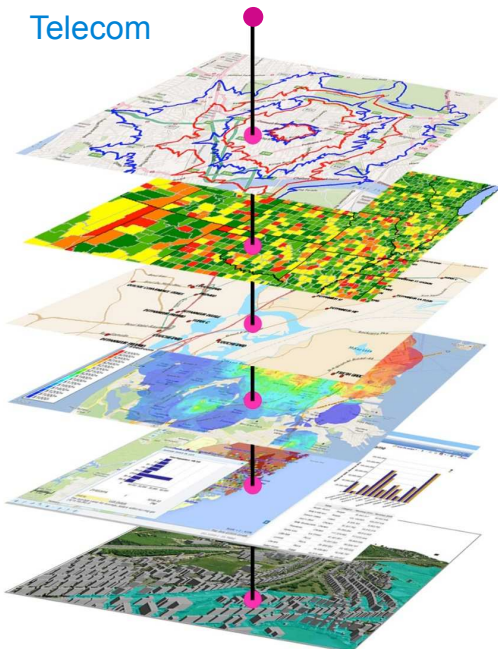

TELECOM USE CASE

4

By Examining Massive Amounts of End-User Mobile Location Data with Other Wireless Network Observation Data, We Can Introduce Subscriber-Verified Coverage that Prove QOS, and Thereby Reduce Churn and Increase NPS.

5

Telecom

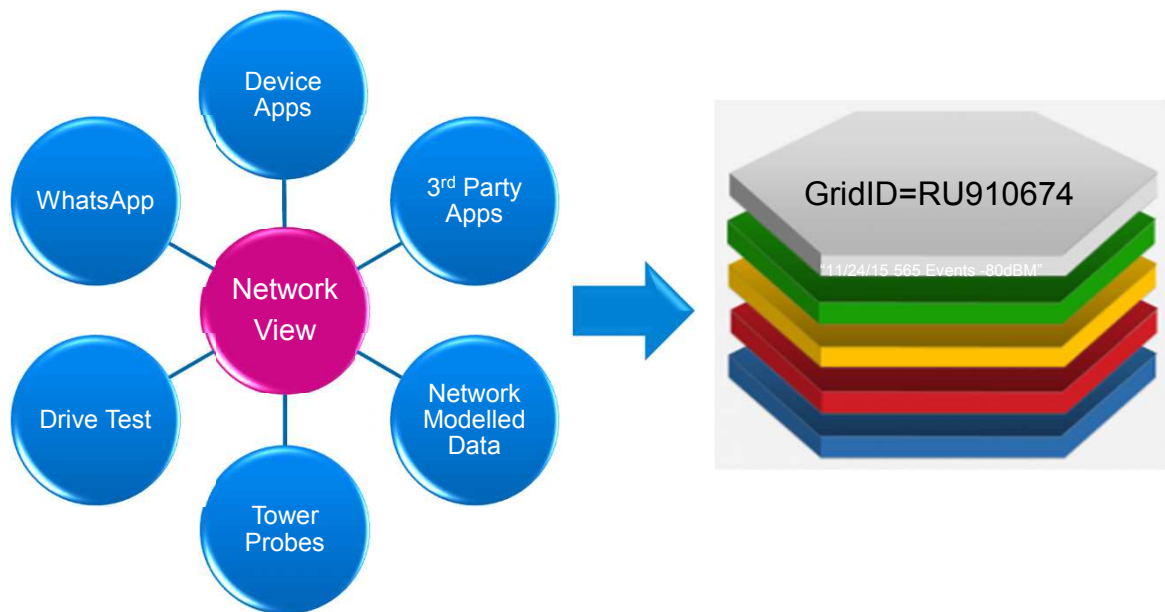

Capitalize on your coverage

- Network Optimization
- Data Monetization
- Customer Acquisition
- Customer Engagement

6

Multi-Source Approach to Optimize Telecom Network Coverage

Multi-Source Approach to Optimize Telecom Network Coverage

Description- Improve Understanding of Network Performance by Collecting, Organizing, Enriching and Visualizing Device Driven Network Insights.

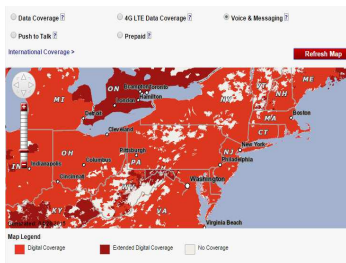

Data Sources- Device Collected Location Based Network Performance Data

Types of Analysis- Perform Spatial Processing via Vector and Raster Based Methods to Generate Map, Data Science and Business Intelligence Data Products That Deliver Network Performance Insights

Expected Business Outcomes- Through the Deployment of this Solution, a Wireless Providers can dramatically Improved ROI and Decision Making on Infrastructure Investments in New Spectrum, Small Cell and Tower Based Technologies.

Multi-Source Approach to Optimize Telecom Network Coverage

Old: RF Propagation Modeling

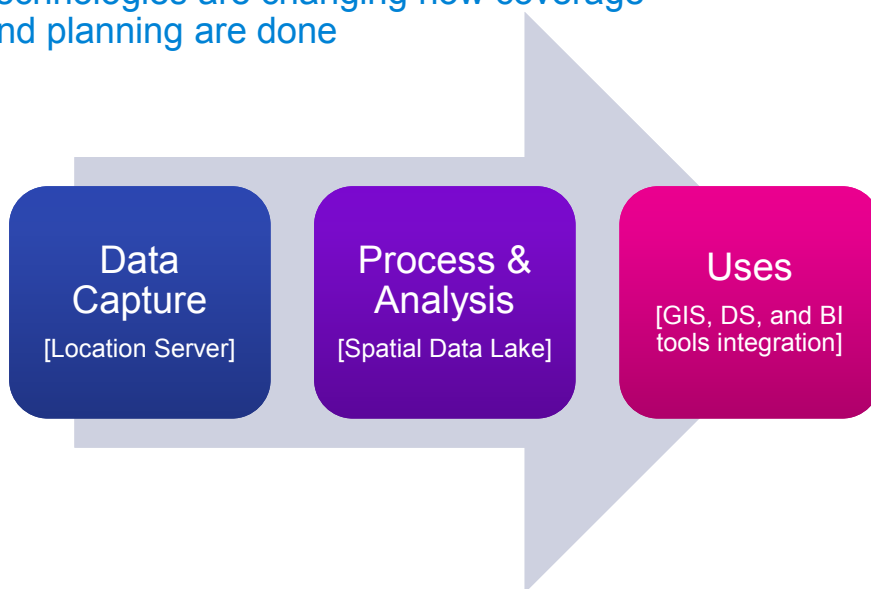

New: Big Data + RF Propagation Modeling

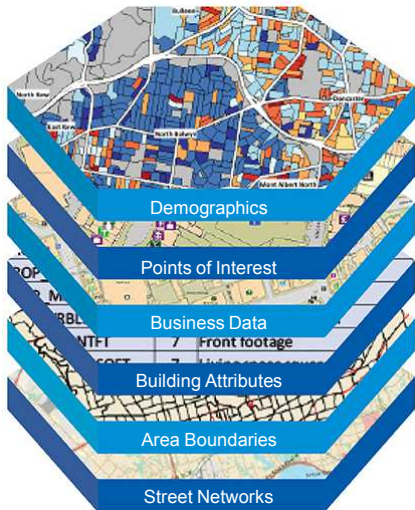

Perspective	Old	New
Accuracy	Model based	Verified with real users
Granularity	Coarse	High (60 m or lower hex)
Timing	Monthly or worse	Near Real Time
Information	Yes/No	Rich (e.g.network speed)

9

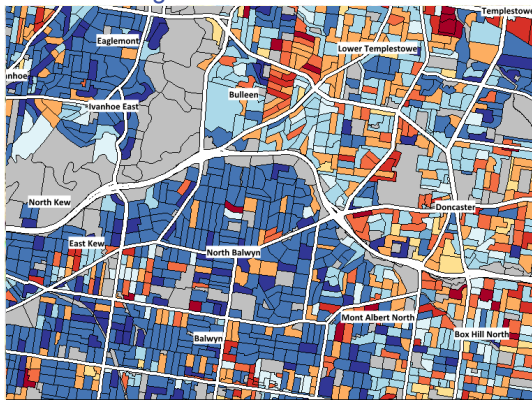

Big Data technologies are changing how coverage analysis and planning are done

Each layer of location data adds new details and additional insight.

Location Insights

Complete location attributes by grid segment.

Scalability & Performance

90 billion records in 30 min

Mobile log records

Hex level coverage map

Hex-binning

count: 5
rssi_mean: -93
Drop_call: 0
...

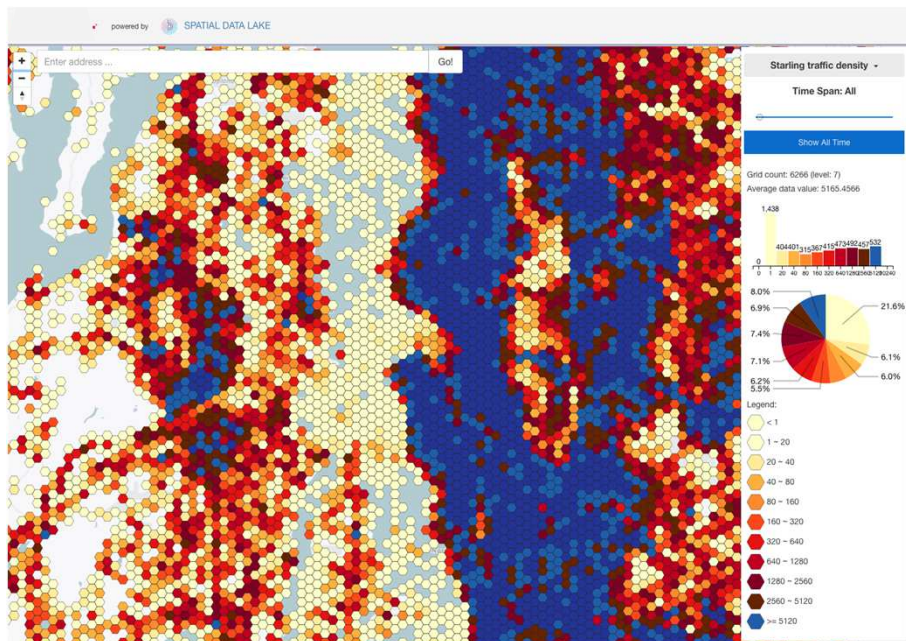

Verification

90 days aggregation

Spatial Data Lake - Traffic Density

Big Data Driven Spatial Analytics and Visualization Engine

Spatial Data Lake

Applications APIS Tools Admin About

Extreme GeoSpatial Processing in Big Data

Spatial Data Lake is a highly scalable geo-spatial analytic platform for enterprise to process, analyze, manage, and visualize all location related data assets across organizational boundaries.

Get Started

APPLICATIONS

- Device Analysis Map
- Network Analysis Map
- Personalized Analysis Map

DEVELOPER APIS

- Raster Map API
- Vector Map API
- Event & Data API

DATA SCIENCE TOOLS

- Spatial Data Analytics
- Spatial Data Visualization
- Spatial Data Collaboration
