

# SEEA NATURAL CAPITAL ACCOUNTING AND VALUATION OF ECOSYSTEM SERVICES

Gabriela García Seco  
INEGI

**OVERVIEW OF THE SEEA  
EXPERIMENTAL ECOSYSTEM  
ACCOUNTING**

# LEGAL AND POLITICAL COMMITMENTS

1992: CBD Aichi Targets (Target 2)

1992: Agenda 21 (Rio)

2012: The Future we Want (Rio+20)

2015: 2030 Agenda for Sustainable Development and the Sustainable Development Goals

European Legislation

Natural Capital Accounting

# THE SYSTEM OF ENVIRONMENTAL ECONOMIC ACCOUNTING

- An internationally agreed statistical framework to measure the environment and its interactions with economy
- The SEEA Central Framework was adopted as an international statistical standard by the UN Statistical Commission in 2012
- The SEEA Experimental Ecosystem Accounting complement the Central Framework and represent international efforts toward coherent ecosystem accounting

# NATURAL CAPITAL ACCOUNTING

Individual environmental assets & resources:

Timber  
Water  
Soil  
Fish

Ecosystems: Biotic and abiotic elements functioning together:

Forests  
Lakes  
Cropland

**SEEA Central Framework (SEEA\_CF)** starts with economy and links to physical information on natural assets, flows and residuals

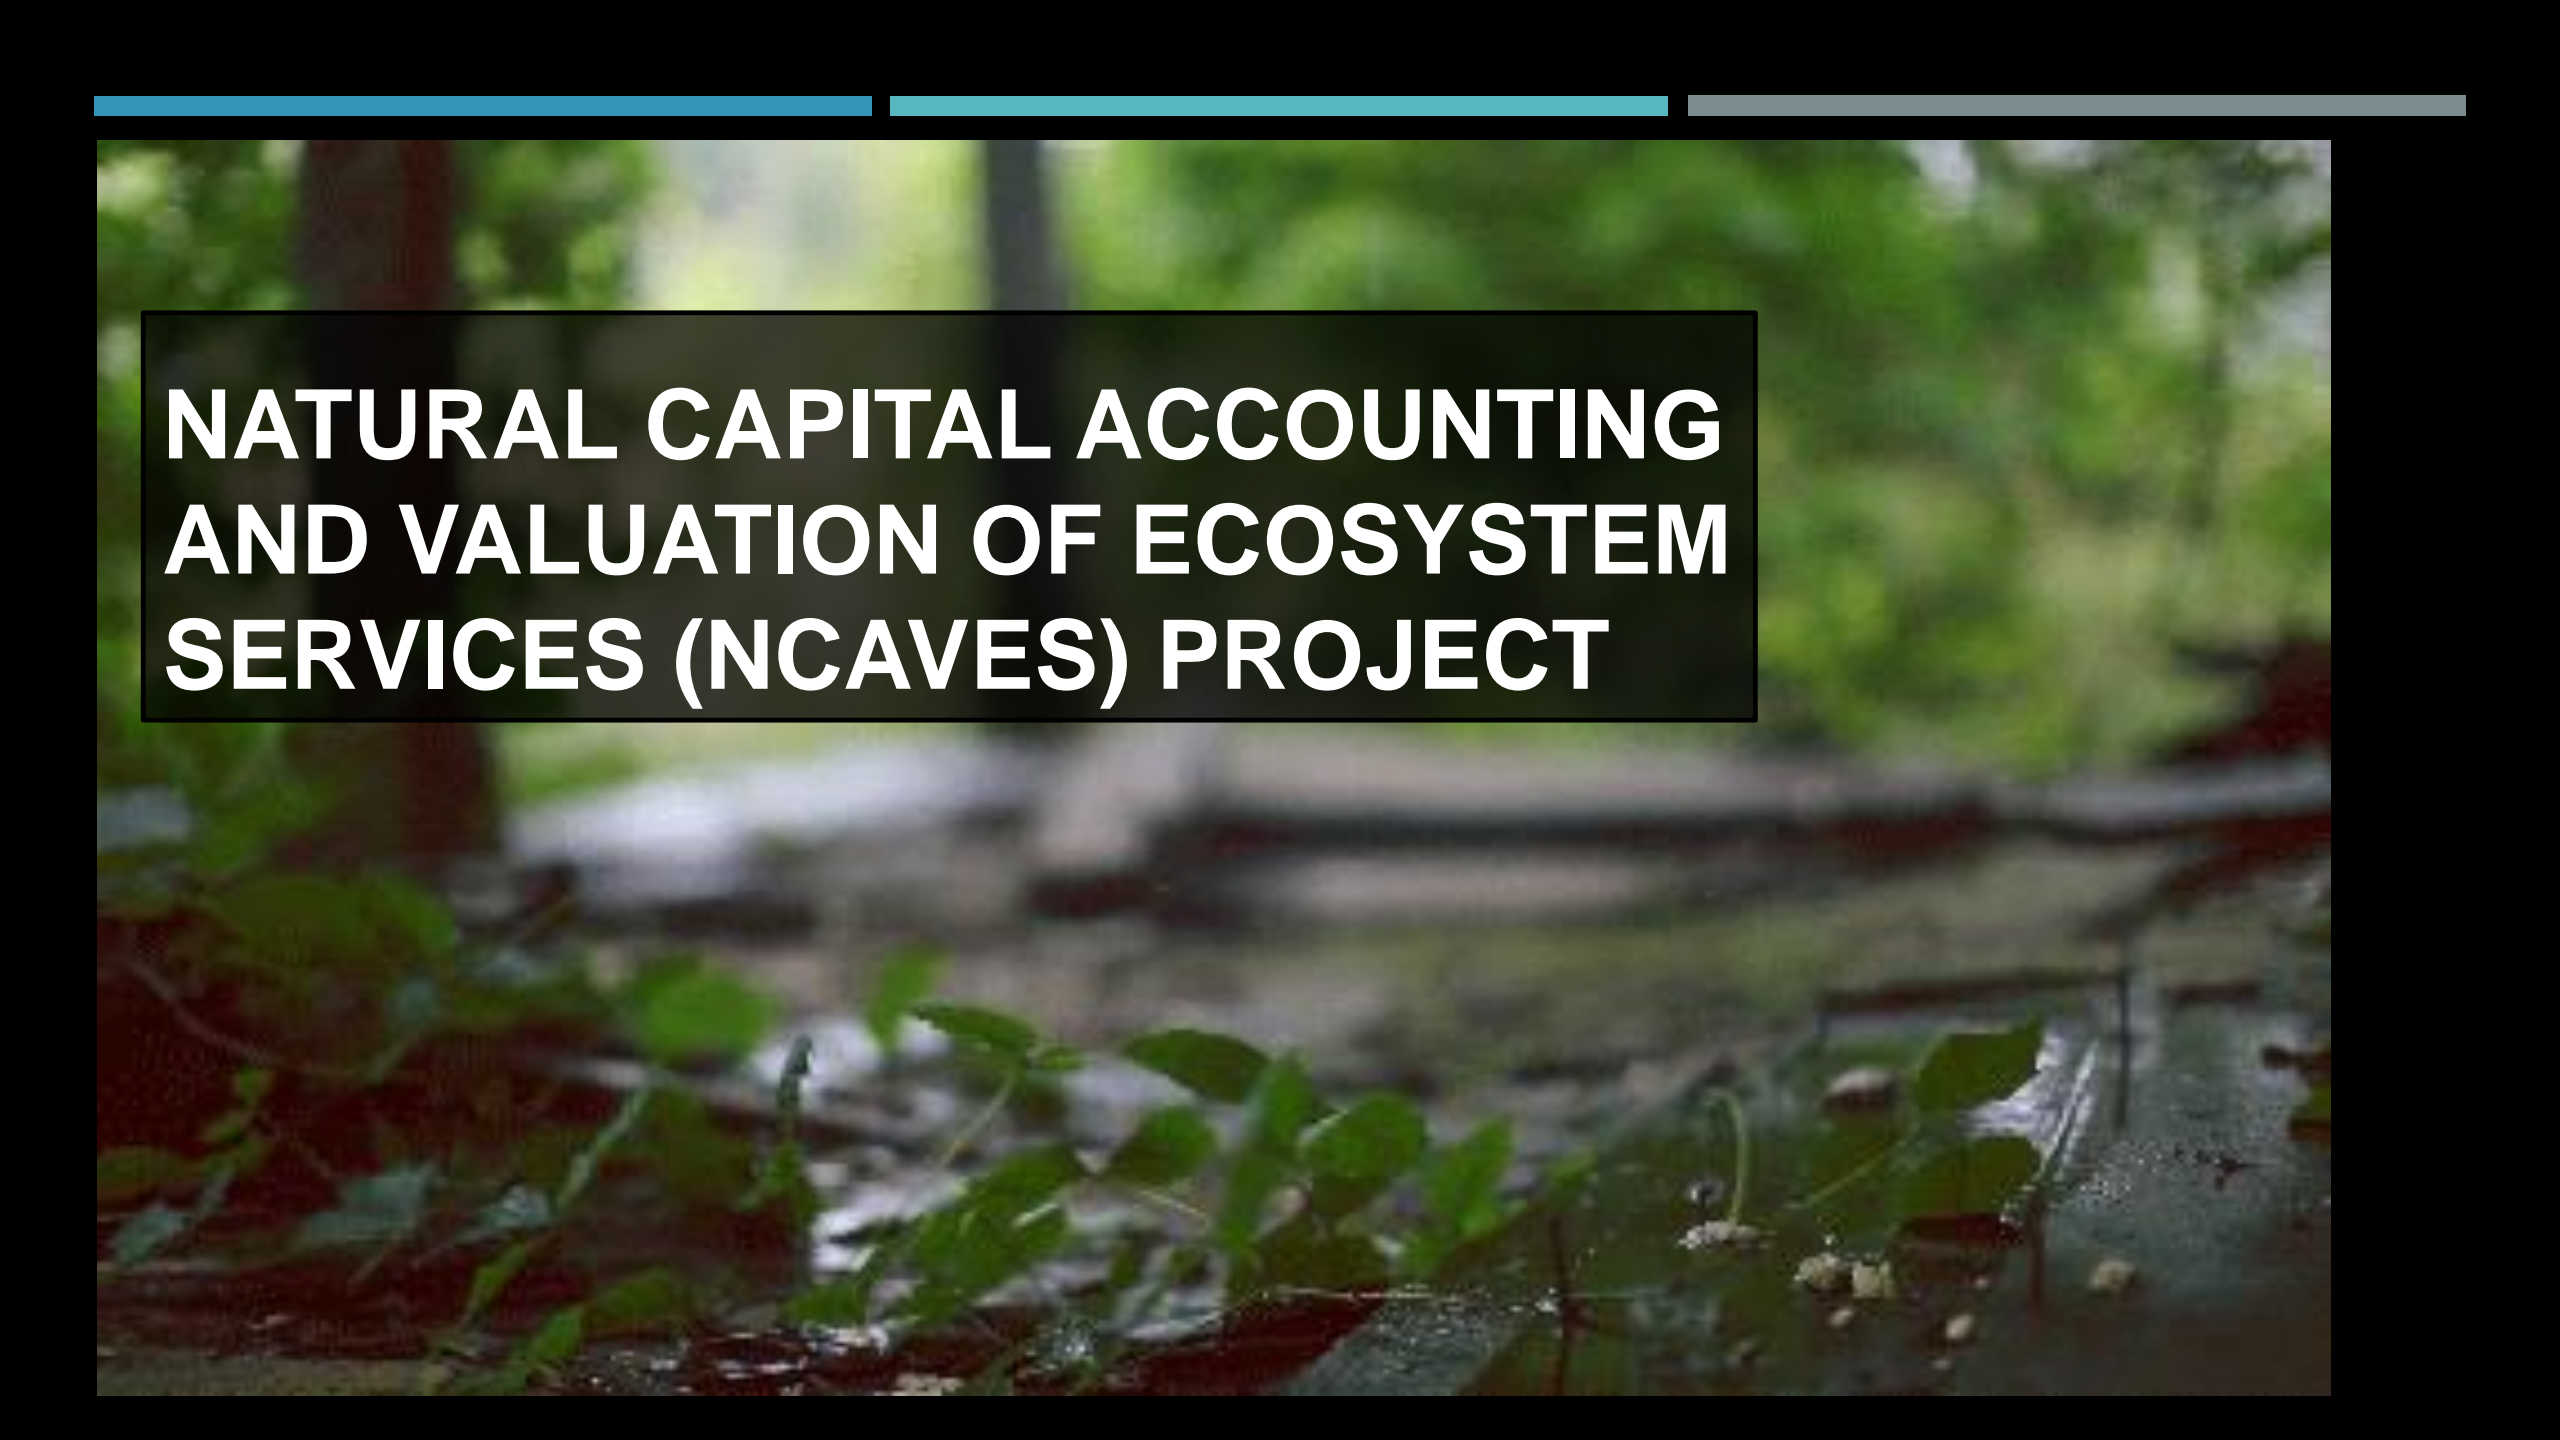

**SEEA Experimental Ecosystem Accounting (SEEA-EEA)** starts with ecosystems and links their services to economic and other human activity

**Together**, they provide the foundation for measuring the relationship between the environment, and economic and other human activity

# SEEA

<b>SEEA-CF</b> (Central Framework)	<ul style="list-style-type: none"><li>• <b>Assets</b></li><li>• <b>Physical flows</b></li><li>• <b>Monetary flows</b></li></ul>	<ul style="list-style-type: none"><li>• Minerals &amp; Energy, Land, Timber, Soil, Water, Aquatic, Other Biological</li><li>• Materials, Energy, Water, Emissions, Effluents, Wastes</li><li>• Protection expenditures, taxes &amp; subsidies</li></ul>
<b>SEEA Water;</b> <b>SEEA Energy;</b> <b>SEEA Agriculture,</b> <b>Forestry and Fisheries</b>	Add sector detail	As above for <ul style="list-style-type: none"><li>• Water</li><li>• Energy</li><li>• Agricultural, Forestry and Fisheries</li></ul>
<b>SEEA-EEA</b> (Experimental Ecosystem Accounting)	Adds spatial detail and ecosystem perspective	Extent, Condition, Ecosystem Services, Thematic: Carbon, Water, Biodiversity

**NATURAL CAPITAL ACCOUNTING  
AND VALUATION OF ECOSYSTEM  
SERVICES (NCAVES) PROJECT**

# PARTNERS

- Implementing partners
  - United Nations Statistics Division
  - United Nations Environment Programme
  - (CBD)
- Sponsor
  - European Union
  - Partnership Instrument
- Five partner countries
  - Brazil, China, India, Mexico, South Africa
- Project duration
  - 4 years from 2017-2020

# OVERALL OBJECTIVES

- Advance the knowledge agenda on environmental-economic and ecosystem accounting
- Initiate pilot testing of SEEA Experimental Ecosystem Accounting, ecosystem valuation and environmental-economic analysis with a view to:
  - improving the measurement of natural biotic resources, ecosystems and their services at the (sub)national level
  - mainstreaming biodiversity and ecosystems in (sub)national level policy-planning and implementation

# WORK STREAMS

Piloting ecosystem accounts (in each of the 5 partner countries) for selected areas (national and/or regional)

Developing guidelines and methodology

Indicators

Business accounting (sustainability reporting)

Communication and outreach

Training and capacity development

# TIMEFRAME OF THE PROJECT

Sep 2016 –  
April 2017

- Design

May 2017 –  
April 2018

- Development

May 2018-  
Q1 2020

- Implementation

Q2 2020

- Closure + follow-up

# COUNTRY ACTIVITIES IN 2017

- Project launched in each partner country
- Inception missions were undertaken for in-country assessments
- Discussions of the national work programme to advance Natural Capital Accounting initiated and work plan drafted

Natural Capital Accounting and  
Valuation of Ecosystem Services

SEMARNAT

# GLOBAL ACTIVITIES IN 2017

- Technical Recommendations of the SEEA EEA published
- Regional Training Workshop on the SEEA EEA in Asia-Pacific jointly organized with the National Bureau of Statistics of China
- 2nd Policy Forum on Natural Capital Accounting jointly organized with the Dutch Ministry of Foreign Affairs and the World Bank.

A world map with a color gradient overlay, ranging from blue in the north to red in the south. The text 'GLOBAL EVENTS IN 2018' is overlaid on the map in a large, bold, blue font.

# GLOBAL EVENTS IN 2018

- Follow up mission to 5 partner countries
- Expert meeting on Ecosystem Valuation in the context of Natural Capital Accounting (24-26 April, Bonn)
- Forum of Experts in Ecosystem Accounting (18-20 June, New York, USA)
- Side-event UN World Geospatial Congress (Deqing, China 19-21 Nov)
- Side-event Convention on Biodiversity COP -14 (22 Nov. 2018, Cairo, Egypt)
- Regional Training Workshop on the SEEA Experimental Ecosystem Accounting in Latin America region (28-30 November, Rio de Janeiro)
- 3<sup>rd</sup> Policy Forum on Natural Capital Accounting (26-27 November, Paris)
- Expert meeting on SEEA indicators (5-7 February 2019, Cambridge, UK)
- Forum of Experts in Ecosystems Accounting 2018 (April/May 2019, New York, USA)

# BACKGROUND

## 1. MÉXICO - ADVANCING NATURAL CAPITAL ACCOUNTING (ANCA) 2014 - 2016

2014: Mexico, Bhutan, Chile, Indonesia, Vietnam, Mauritius and South Africa pilot countries for the *Advancing Natural Capital Accounting* (ANCA) project.

Mexican project

- suppliers and users of environmental-economic information identified
- country's environmental policy priorities identified
- stakeholders and existent technical capacities identified

## 2. MÉXICO - NATURAL CAPITAL ACCOUNTING AND VALUATION OF ECOSYSTEMS SERVICES PROJECT 2017 - 2020

Mexico, Brazil China, India and South Africa, pilot countries

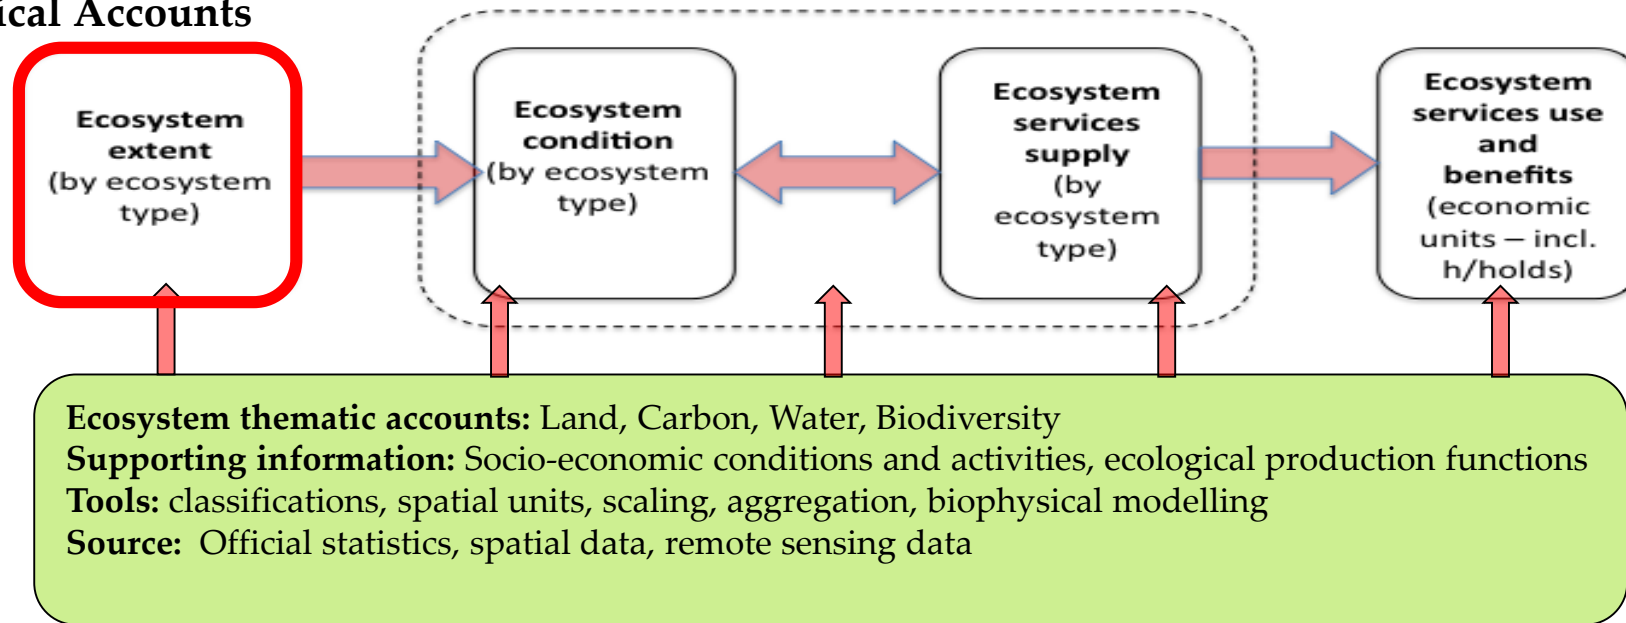

Main objectives:

- Compiling select ecosystem accounts (physical and monetary terms)
- Developing guidelines and methodology that contribute to the implementation of SEEA – EEA.
- Conduct capacity-building and knowledge-sharing activities as ways to enlarge the community of

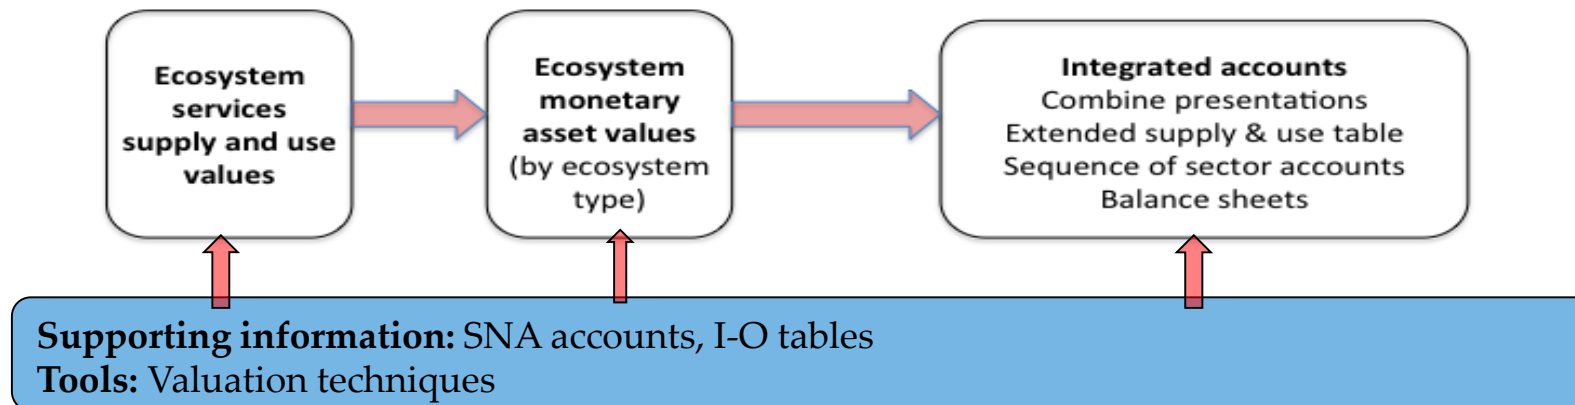

# BROAD STEPS IN ECOSYSTEM ACCOUNTING

## b. Monetary Accounts

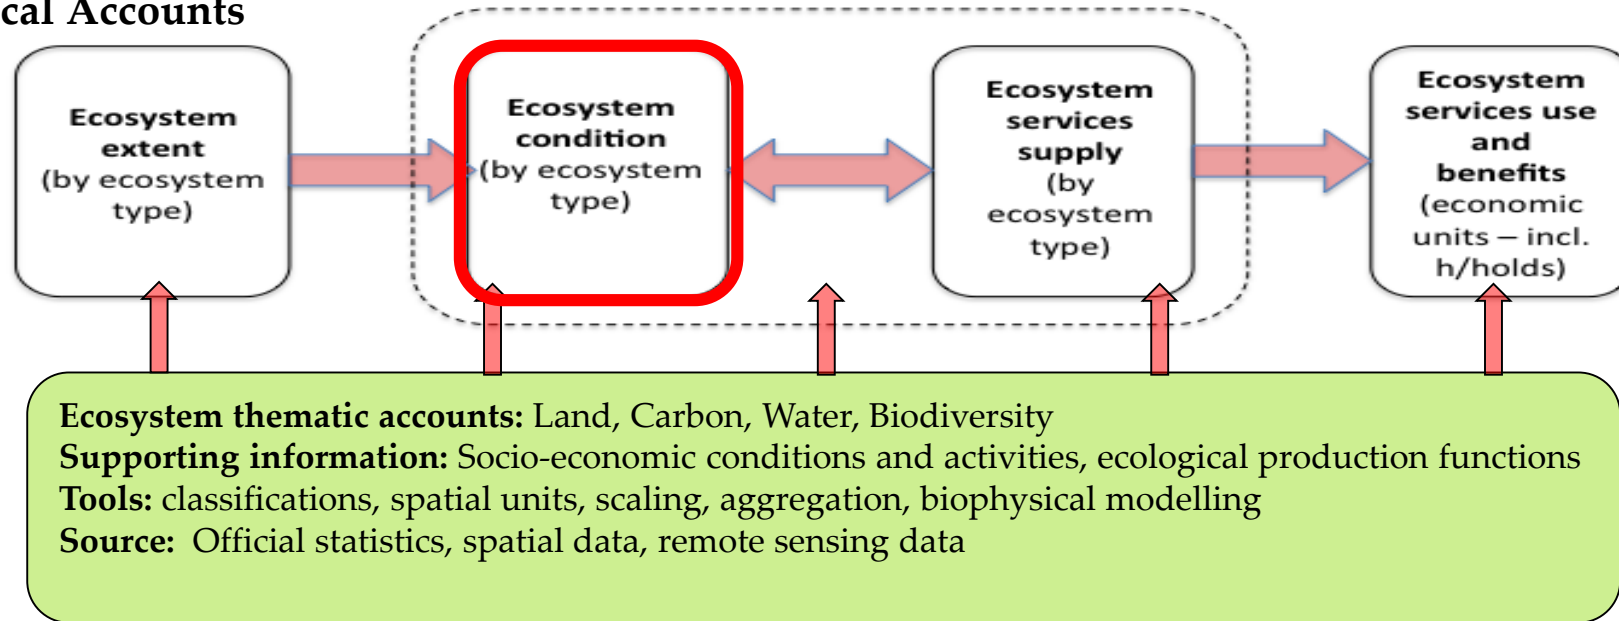

# ECOSYSTEM CLASSIFICATION - Vegetation and land-use

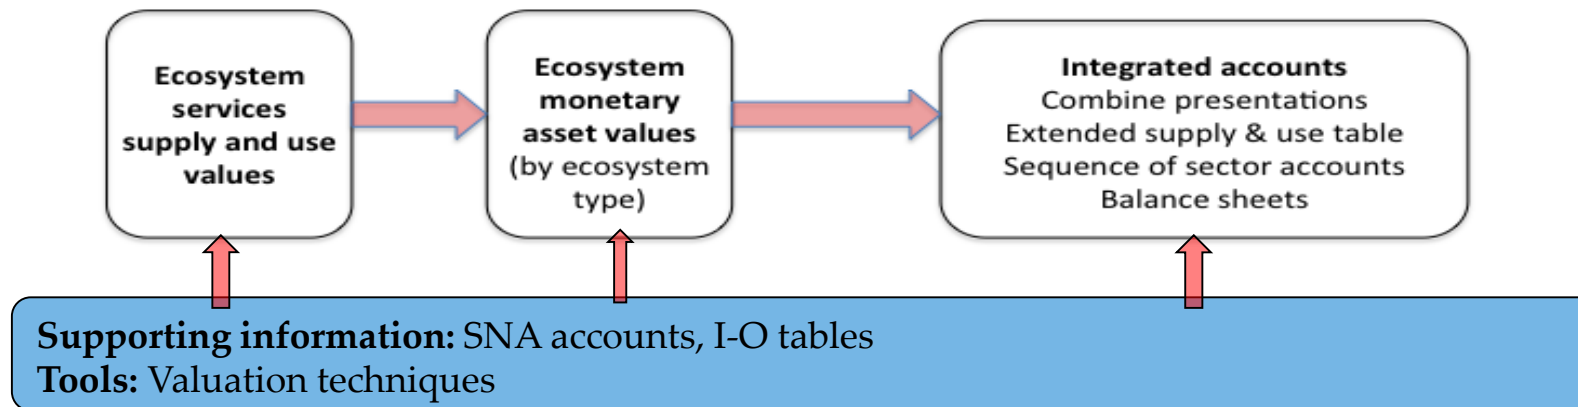

# BROAD STEPS IN ECOSYSTEM ACCOUNTING

## a. Physical Accounts

## b. Monetary Accounts

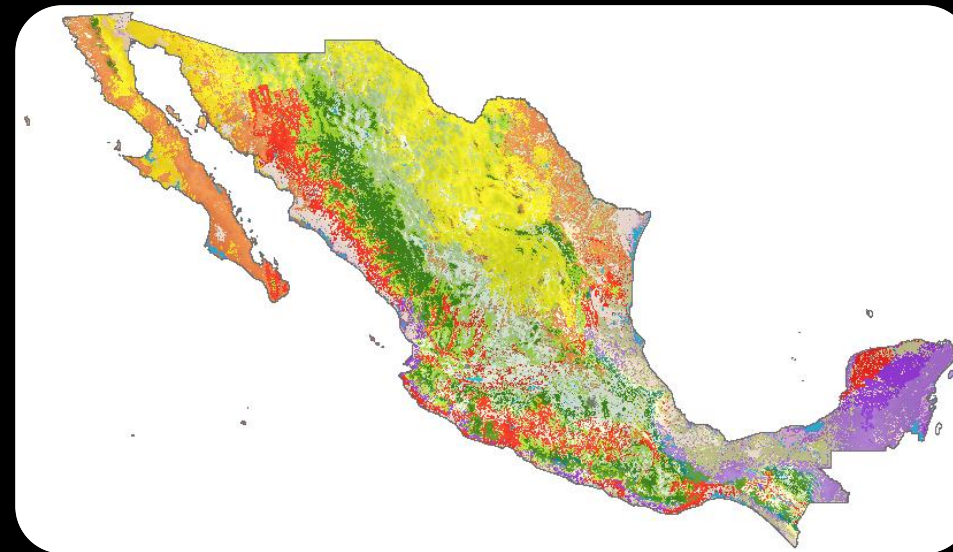

# Ecosystem condition

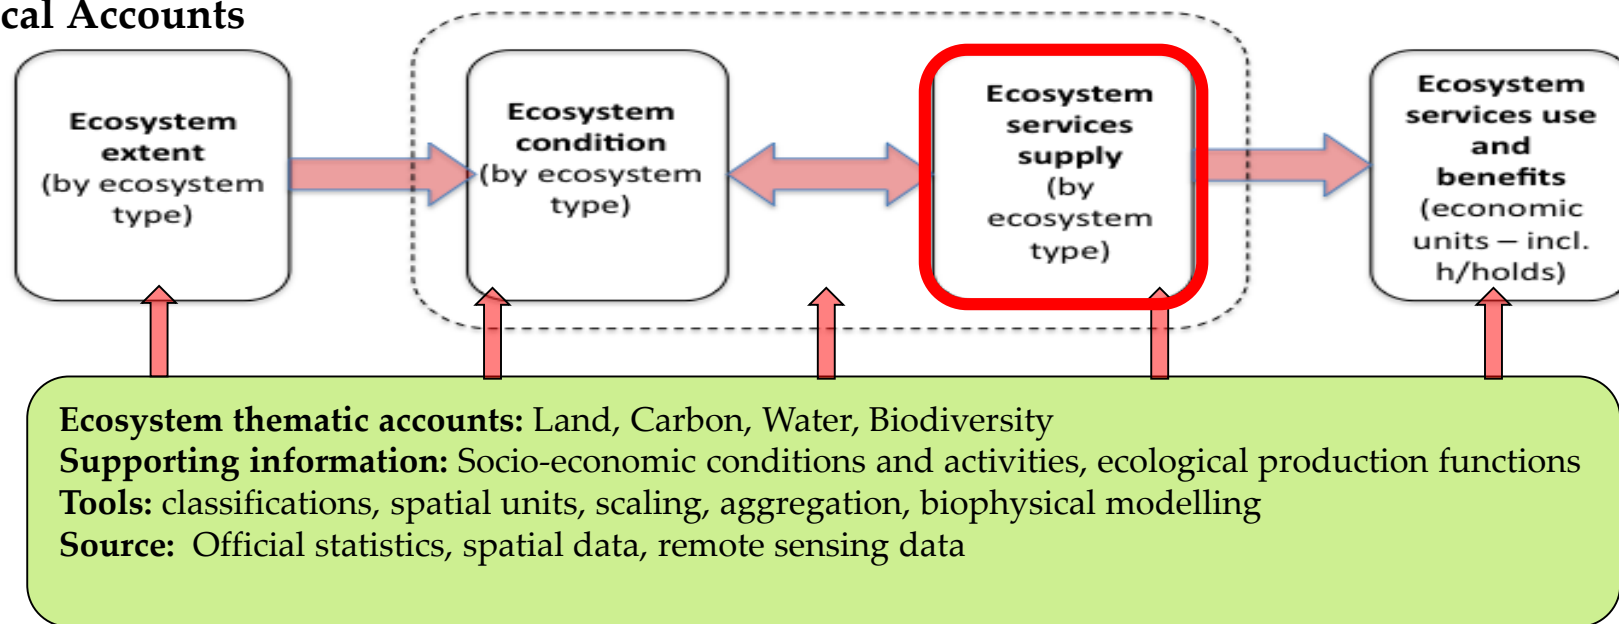

- 1.- Conservation status of vegetation (primary vs. second-growth)
  - Based on INEGI's vegetation and land-use charts
2. Soil erosion (INEGI's hydric soil erosion chart, 2015)
3. Soil organic carbon content (INEGI's chart)
4. Biodiversity: Collection records for 14,424 plant species (CONABIO)
  - No. species of higher plants,
  - No. of species at risk,
  - Presence/No. of exotic invasive species

Vegetation and land-use

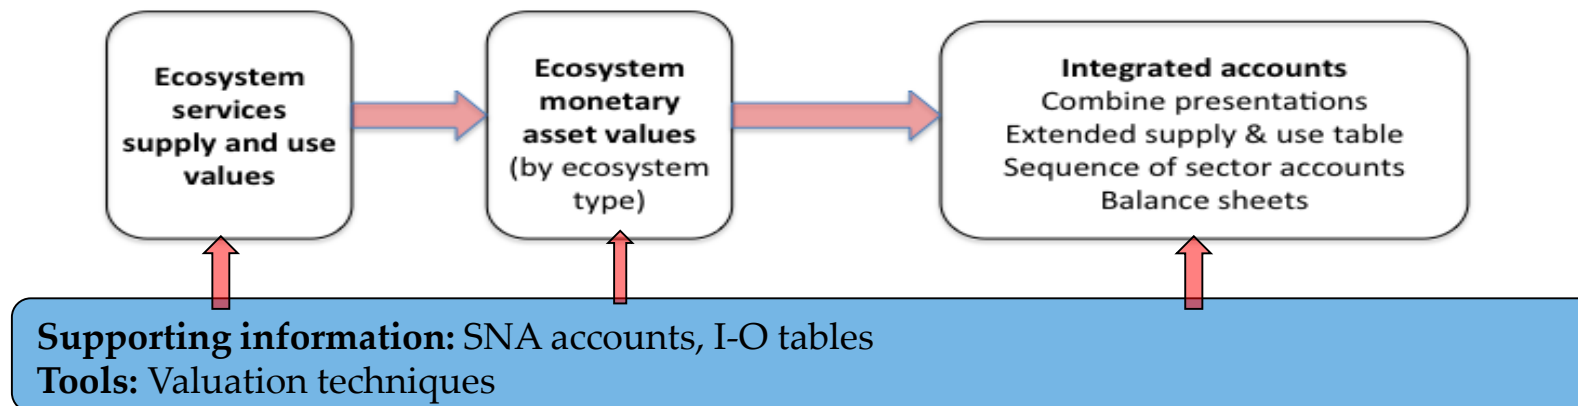

# BROAD STEPS IN ECOSYSTEM ACCOUNTING

## a. Physical Accounts

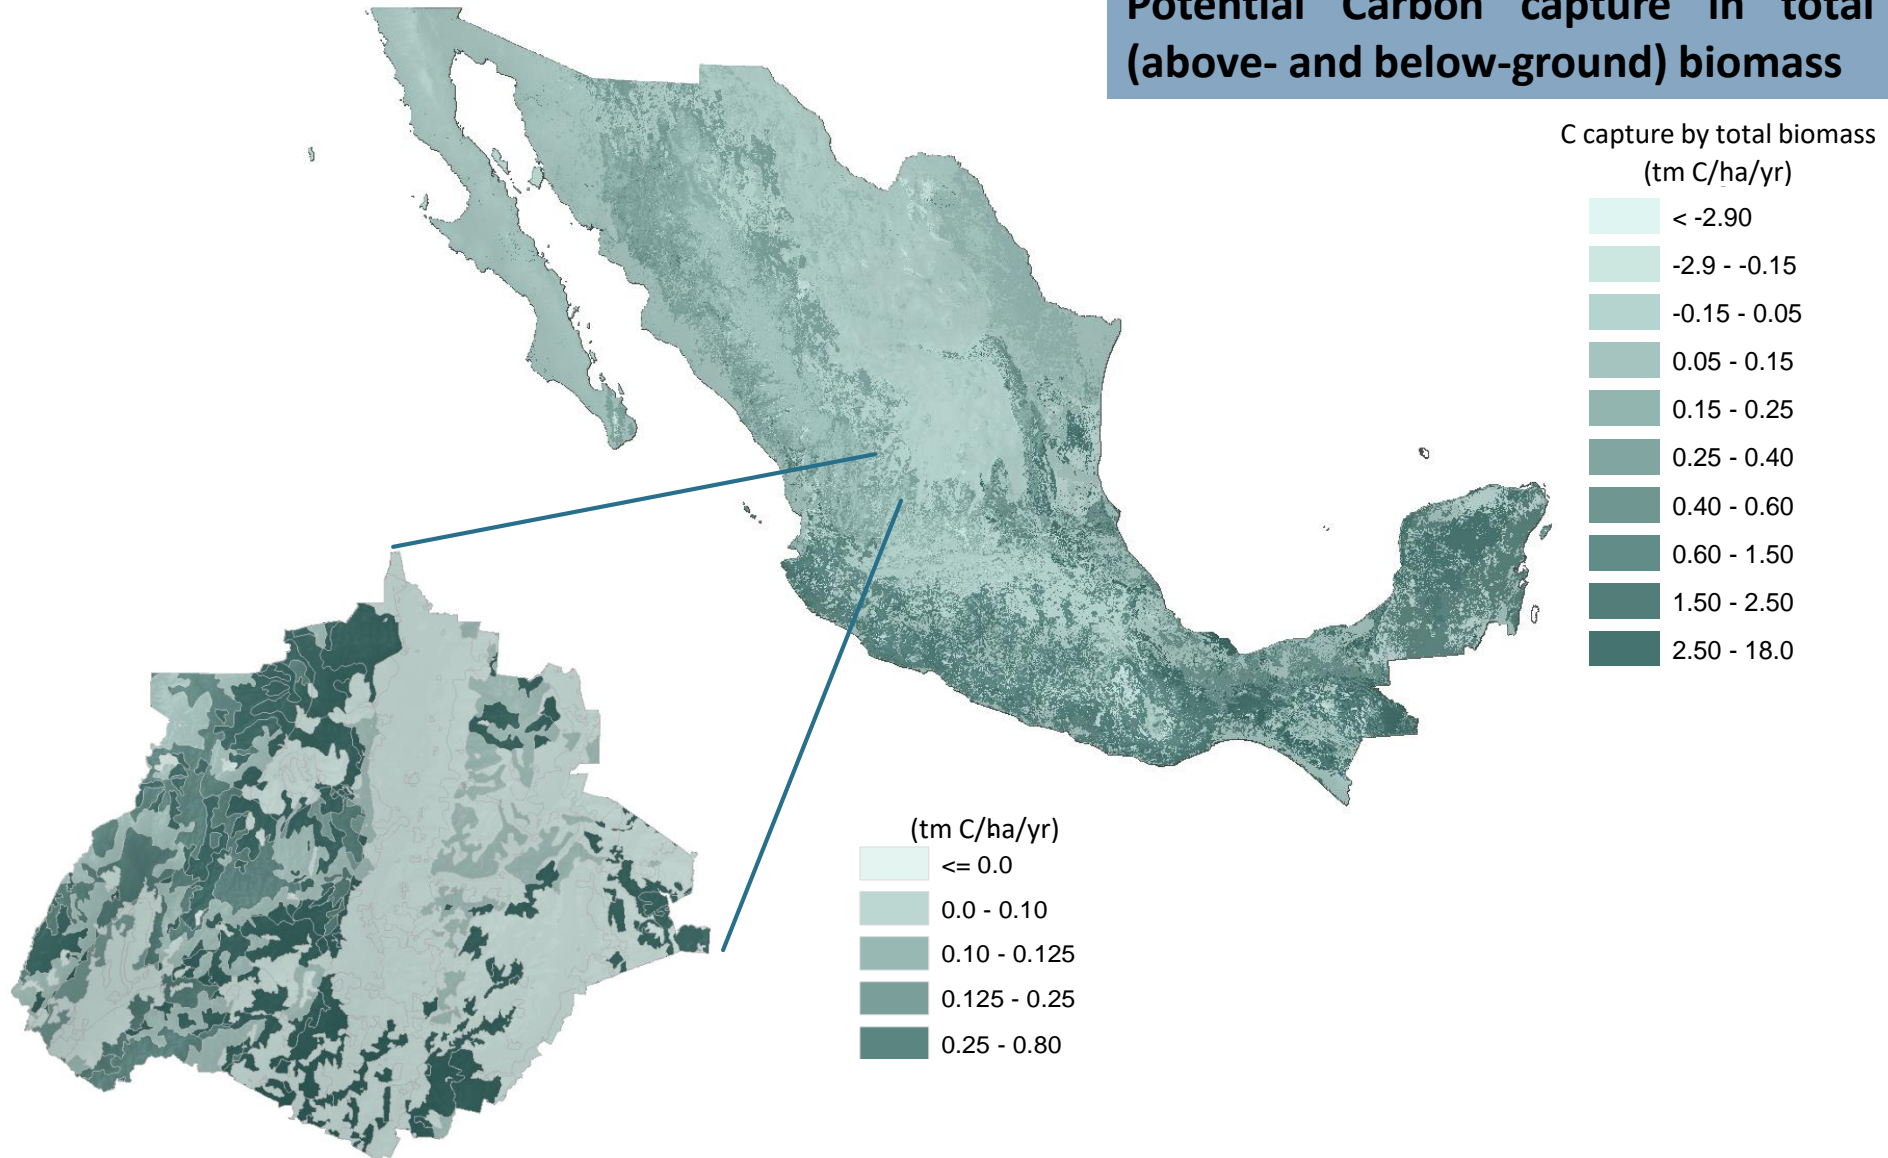

## b. Monetary Accounts

# Mapping and valuation (physical terms) of ecosystem services

## Potential Carbon capture in total (above- and below-ground) biomass

# Mapping and valuation (physical terms) of ecosystem services in Aguascalientes

Carbon storage and Carbon capture by Aguascalientes ecosystems in 2007 and 2011

	Ecosystem condition	ECOSYSTEMS					STATE-WIDE TOTAL
		Conifer forest	Oak woodland	Woody xerophytic shrubland	Grassland	Deciduous tropical forest	
Carbon stored ca. 2007 (tm)	Primary	43,730	795,746	33,8379	716,732	-	2,591,033
	Secondary	-	701,878	5,045	-	294,064	
Carbon stored ca. 2011 (tm)	Primary	44,135	817,806	42,581	854,161	-	3,021,576
	Secondary	-	848,266	10,550	-	404,077	
Potential Carbon capture (tm/yr)	Primary	165	8,759	285	39,378	-	59,352
	Secondary	-	4,375	1,316	-	5,074	

# Mapping and valuation (physical terms) of ecosystem services

## SURFACE WATER SUPPLY

$$Pp = ETR + ES + I$$

Water balance:

Total amount of rain (**Pp**)

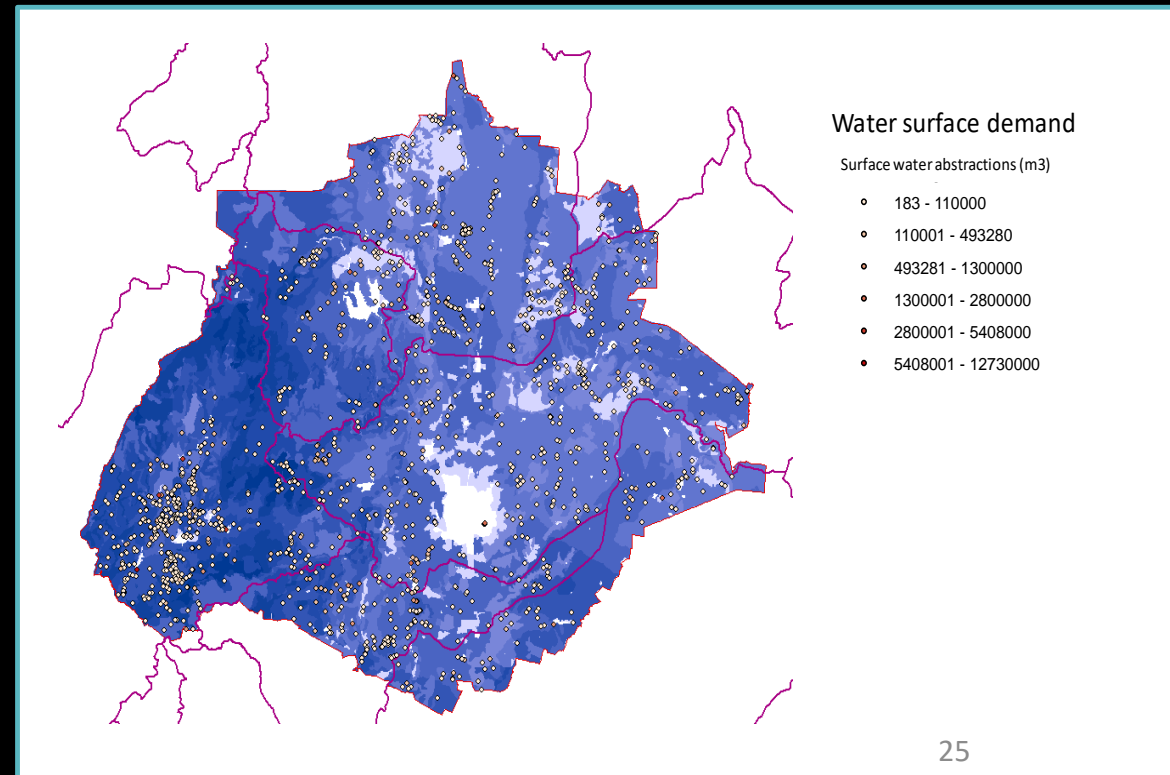

Evapotranspiration (**ETR**)

Infiltration (**I**)

Runs-off over the soil's surface (**ES**)

Water yield is estimated as the contribution of each portion of the landscape to surface run-off, considering the effects of land-use and land-cover, and subtracting these from the average annual precipitation.

Water yield was estimated based on the Indirect Method stated in Standard NOM-011 of the Mexican National Water Agency, with coefficients refined by INEGI's Hydrology Department

## Lessons and challenges

Abundance of data  
Data available  
Data about specific services

# KEY PRINCIPLES OF THE LAND CLASSIFICATION IN MEXICO

# Vegetation types and Ecosystems

## VEGETATION TYPE AS AN APPROXIMATION TO ECOSYSTEM TYPES

The vegetation found in a given place is the result of the interaction of the environment: climate, relief, elevation, rock and soil type, as well as the plant and animal species and the ecological processes (succession, disturbances) that occur there.

As such, a vegetation type is a reflection and a synthesis of all those factors: climate, soil, plant composition, vegetation structure, and the ecological succession processes. so the vegetation is a good approximation to an ecosystem.

# LAND COVER MAPS VS. VEGETATION MAPS

- Land cover classes and maps describe in a simplified way the dominant life form present in a given place (trees: forests, shrub: shrub lands, etc.):
- Vegetation characterization goes beyond a description, involving what it is found and why: the environmental and ecological factors.
- It also involves and interpretation of the ecological processes (what is happening), including the effect of human activities and disturbances.

# Land Use and Vegetation: Classification System

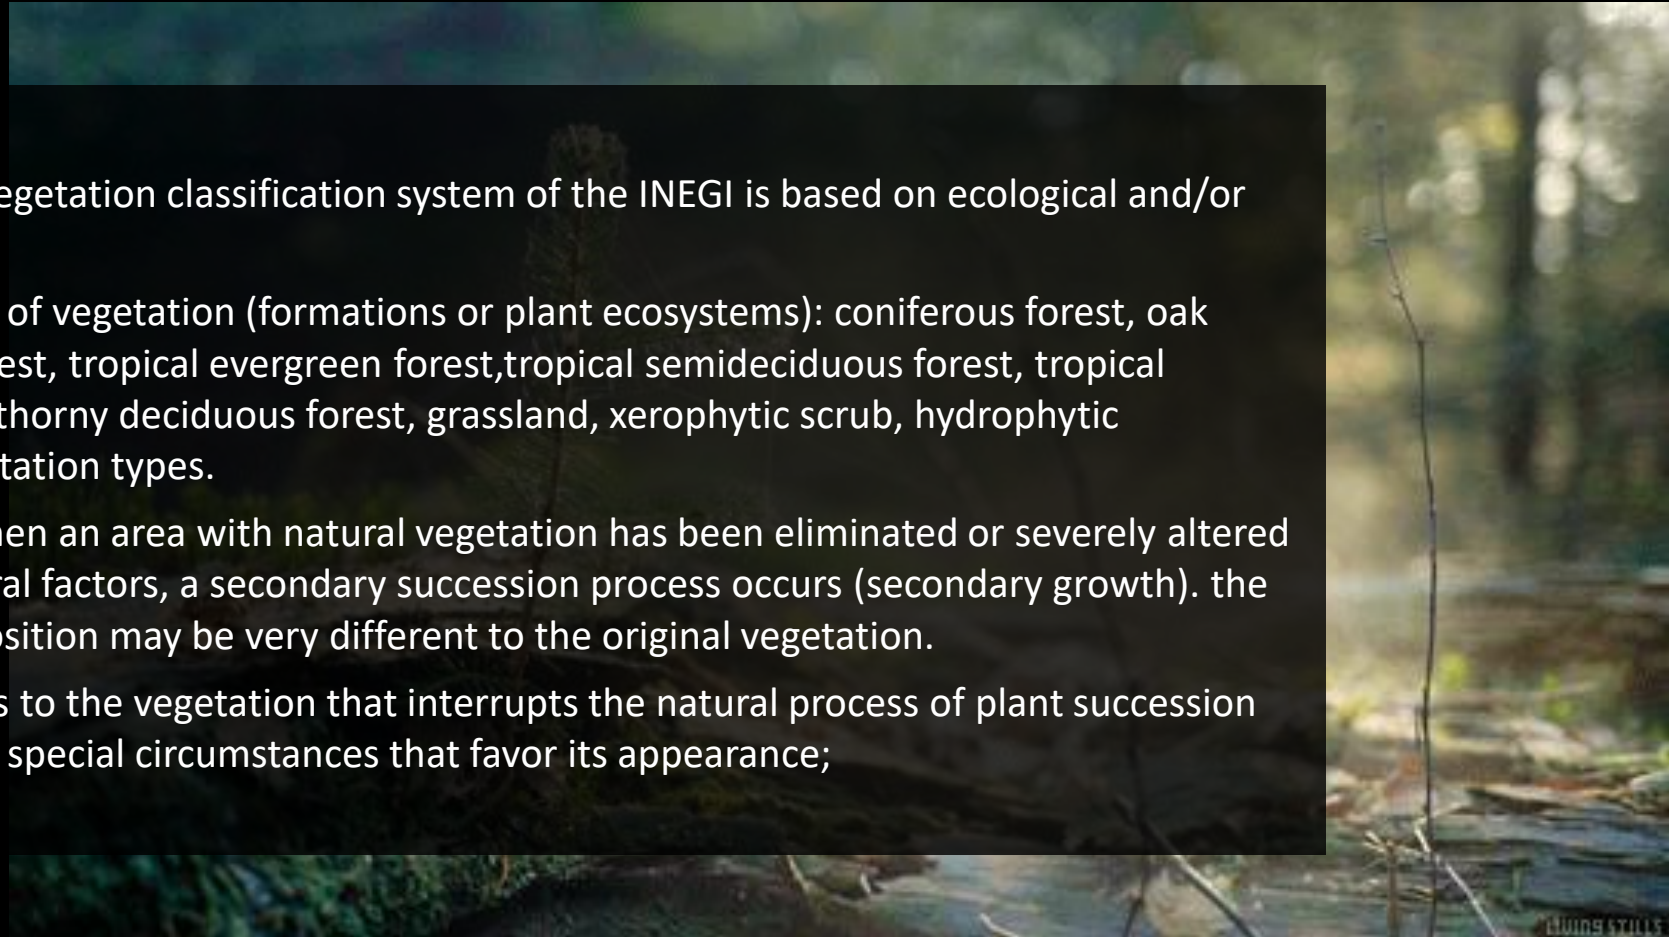

## TYPES OF NATURAL AND INDUCED VEGETATION OF MEXICO

The natural and induced vegetation classification system of the INEGI is based on ecological and/or floristic characteristics.

In a first level large groups of vegetation (formations or plant ecosystems): coniferous forest, oak forest, cloud mountain forest, tropical evergreen forest, tropical semideciduous forest, tropical deciduous forest, tropical thorny deciduous forest, grassland, xerophytic scrub, hydrophytic vegetation and other vegetation types.

Secondary vegetation.- when an area with natural vegetation has been eliminated or severely altered by various human or natural factors, a secondary succession process occurs (secondary growth). the structure and plant composition may be very different to the original vegetation.

Induced vegetation.- refers to the vegetation that interrupts the natural process of plant succession due to human activities or special circumstances that favor its appearance;

# Natural and Induced Vegetation Classification

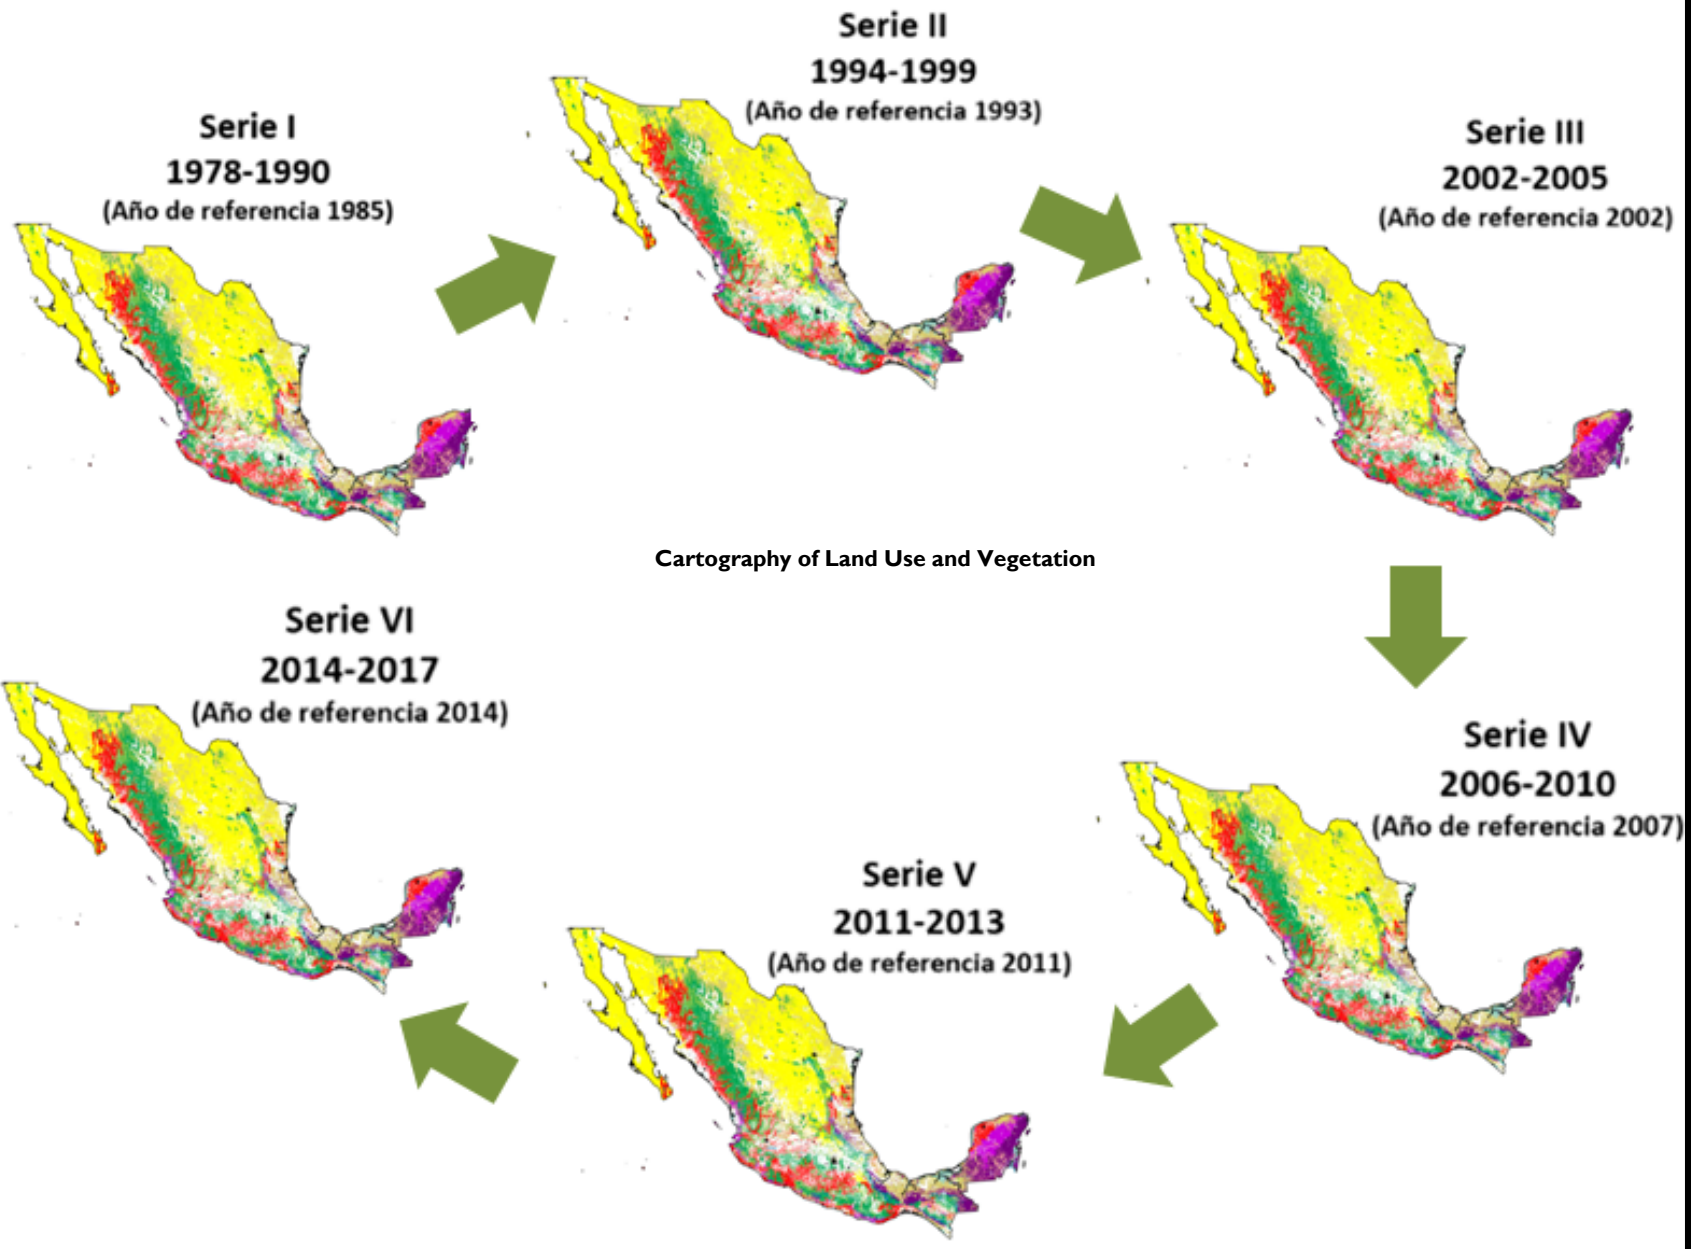

The country's vegetation cover is described considering 12 biomes and 58 types of vegetation, in addition to considering the current state of the vegetation in successional phases (Secondary growth in Tree, Shrubby and Herbaceous seral phases) in 219 combinations registered so far.

PLANT FORMATION	
Coniferous forests	
Oak Forest	
Mountain Cloud Forest	
Evergreen Tropical Forests	
Semideciduous Tropical Forests	
Deciduous Tropical Forests	
Thorny Tropical Forests	
Grasslands	
Xerophytic Scrub	*Man induced groups
Hydrophytic Vegetation	
Other Vegetation Types	
Induced Vegetation *
