

Building a NSDI to support Bahrain's National Geospatial Development

By:

Dr. Khalid A. Rahman Al-Haidan Director of GIS Directorate

Central Informatics Organization (CIO) Kingdom of Bahrain

Email: alhaidanka@cio.gov.bh

UN-GGIM Doha, Qatar February 2013

Central Informatics Organization (CIO)

Central Informatics (CIO) plays a leading role in the implementation of information technology (IT) in the Kingdom of Bahrain and holds the responsibility of:

- Maintaining the National address database.
- Managing and controlling the Central Population Registry (CPR).
- Maintaining a National Geospatial Database and Supporting the existing and new GIS users in the Government and the services sector.
- Imparting the functions of implementation of Information Technology (IT) at National level.
- Managing the functionalities related to National Statistics.

GIS Directorate

The GIS Directorate was established to cater to the increasing needs of geographic information in the Kingdom and to support decision making and other government processes and operations.

Services rendered includes but not limited to:

- GIS oriented Technical support to all stakeholders, Government, and Private Sectors.
- Implementing and maintaining the NSDI for the Kingdom of Bahrain.
- Providing consultancy services to Government organizations in the field of GIS
- Pioneer in providing GIS training for Government employees and stakeholders.

Status Quo of Bahrain Spatial Data "Pre BSDI"

More than 42 Government units using GIS individually.

2

Absence of data sharing and systems integration.

3

Many data formats.

4

 No standards for: GIS software, procedures, applications, and spatial database.

Background - NGISSC

National GIS Steering Committee (NGISSC) was established in compliance to the Government Decree, dated January 24, 2004 – vide Resolution No. (3) by Honorable His Royal Highness the Prime Minister Prince Khalifa Bin Salman Al Khalifa.

National GIS Steering Committee objectives

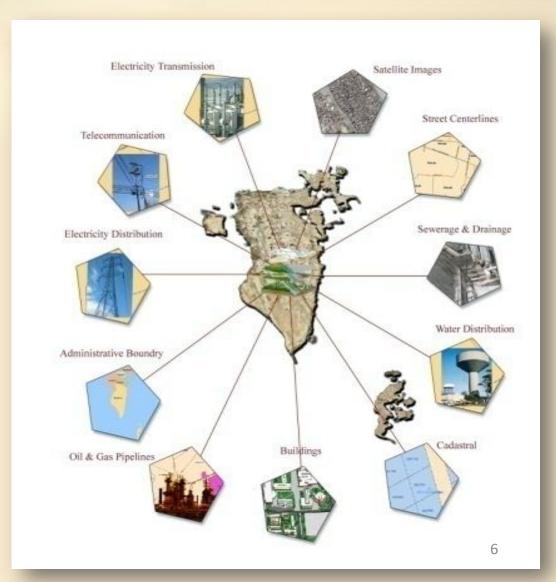

- Make GIS available to improve the efficiency of ministries and public and private organizations;
- Create a Spatial Data Clearinghouse with a centralized data repository.
- Direct and support the development of integrated GIS systems;
- Define the priorities in the development of GIS databases and study and evaluate GIS development proposals;
- Propose strategies and standards for GIS data exchange

Bahrain Spatial Data Infrastructure (BSDI)

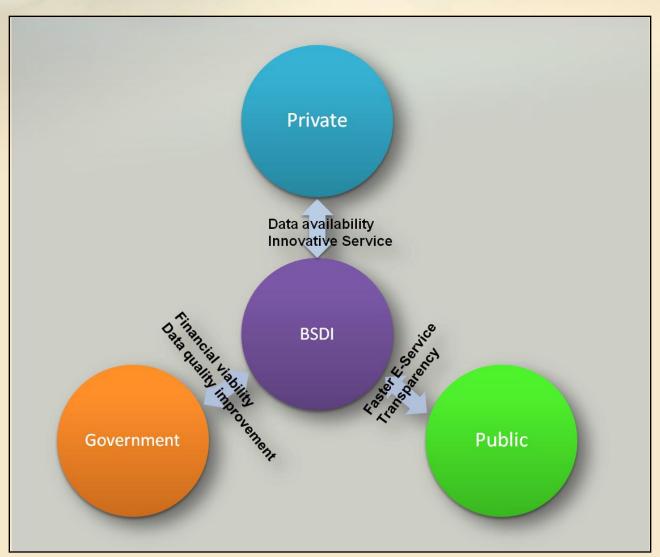

The GIS Directorate (CIO), Kingdom of Bahrain, in compliance of a Government Decree made by Honorable His Royal Highness the Prime Minister Prince Khalifa Bin Salman Al Khalifa, and directives of National GIS Steering Committee (NGISSC) officially initiated the National Spatial Data Infrastructure (NSDI), for the Kingdom of Bahrain, in February 2005.

The GIS Directorate, CIO, in the official capacity of a nominated member of National GIS Steering Committee (NGISSC) administrates Bahrain Spatial Data Infrastructure (BSDI) Portal, to disseminate spatial data.

Targeted Groups

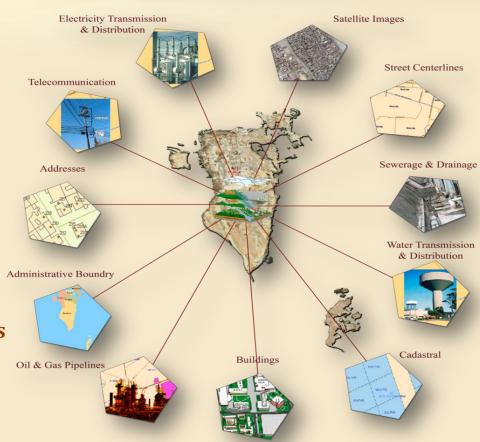

BSDI Portal – Data Layers

- □ Addresses.
- **□** Electricity Network.
- Water Network.
- ☐ Telecommunication Infrastructure.
- **□** Topographic maps.
- Cadastral.
- **□** Buildings Polygons.
- **□** Street centerlines.
- **□** Oil & Gas Pipelines.
- □ Sewerage & Drainage
- **□** Administrative Boundaries
- **□** Point of Interest (POI)
- □ Satellite Images
- Demographic Data
- **□** Marine Layers

قاعدة المعلومات الجغرافية الوطنية Bahrain Spatial Data Infrastructure (BSDI)

BSDI Main Stakeholders

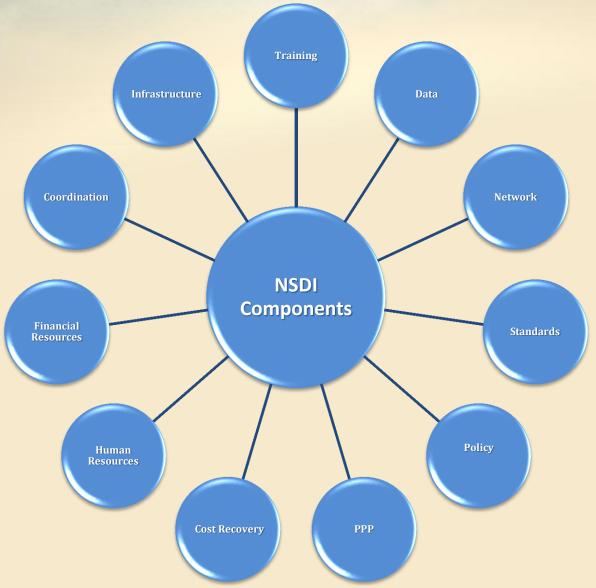

SDI Main Components

KEY TO INDICATORS																							
	Access network	Awareness	Cost recovery	Data exchange	Data ownership	Data quality	Digital datasets (availability)	Financial resources	Institutional framework	Human resources	Leadership	Legal arrangements	Metadata (availability)	Network infrastructure	Organizational characteristics	Procedure	Public/Private partnership	Partnership	Policy	Standards	Services	SDI culture	Technology
ANZLIC (Australia)																							
FGDC (USA)																							
Executive order of US (94)																							
CGDI (Canada)																							
NGDF (UK)																							

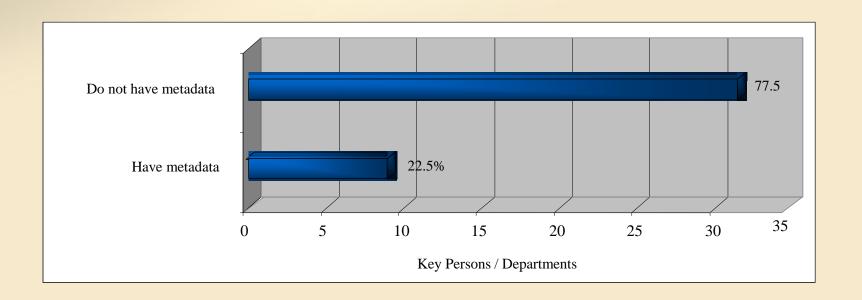

NSDI Components

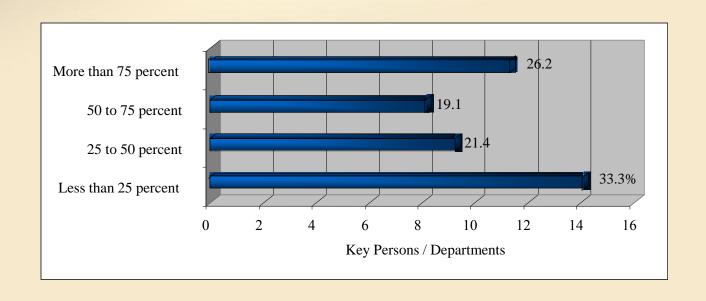

Assessment of the local conditions in Relation to NSDI Implementation

The Metadata of the Geospatial Data

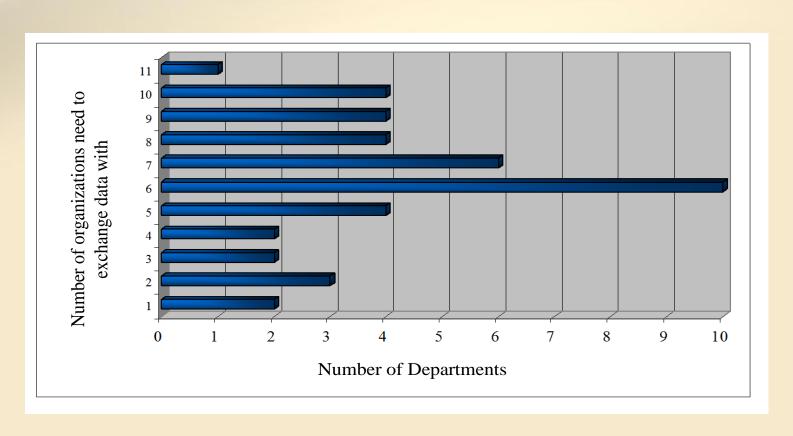

The Departmental Tasks Performed using Geospatial Data

The Exchange of Data with other Organizations

BSDI Components

STANDARDS

POLICY

DATA

HUMAN RESOURCE

FINANCIAL RESOURCE

COST RECOVERY

TRAINING

COORDINATION

Bahrain Data Standards

Bahrain Data Standards

It is a reference document for the technical specifications of the Geospatial Data in the Kingdom, which constitute a reference for the Kingdoms Public and Private sectors entities to ensure the data and systems matching between all relevant entities.

Bahrain
Data Exchange
Policy

A consolidated document which covers the Data exchange details and Privileges through the Bahrain Spatial Data Infrastructure.

Training on:

1- GIS Concepts. 2-Remote Sensing. 3-BSDI Training.

GIS Awareness Programs

GIS Awareness Programs

BSDI Initiative Achievements

Main Achievements

Achievement	Example	Status		
Institutional Framework	(e.g. data sharing policies, data pricing policies, etc.).	Published		
Technical Standards	(data format, data exchange, software, metadata, etc.).	Published		
Fundamental Datasets	(e.g. geographic datasets, Basic map features, etc.).	Achieved		
Technical Framework	(e.g. actual hardware, communication facilities, etc.).	Achieved		
BSDI Portal	Data Sharing, Clearing house	<i>Implemen</i> ted		
E-WayLeave	Service Oriented Application	<i>Implemen</i> ted		

Return On Investment of BSDI

Challenges & Solutions

Challenge

 Data Inconsistency - Mismatched coordinate system, Missing & Incomplete Data, Data Duplication, Limited documentation

Solution

- Bahrain Spatial Data Standards Appropriate Data, Technology, Procedures were established.
- Ensured Effective Sharing & Dissemination
- Stakeholders committed to follow standards through legislation

Challenges & Solutions

Challenge

 Barriers – Cultural, Institutional & Legal barriers prevented or delayed the sharing of spatial data

Solution

 Bahrain Data Exchange Policy developed – Binding deed for data exchange for parties involved and their agreement regarding exchange procedures & protection of data and data sources

 Stakeholder Engagement - Integrating existing GIS data and procedures across the BSDI community is a matter of proactive stakeholder engagement and consultation to avoid redundant and often inconsistent spatial datasets. Engaging the stakeholder's to support the initiative was a major challenge

Solution

 A transaction – based data maintenance approach was taken whereby entities had to streamline their workflows to update the spatial data they are responsible for by recording changes on the ground as they occur as part of their business processes.

Challenges & Solutions

Challenge

 Data Security – Prime Concern for many Stakeholders

Solution

 BSDI portal has thus been hosted within Bahrain Governmental Data Network with highest possible security and network management services with antivirus, firewalls and automated regular backups.

BSDI Evolution

BSDI Evolution rapid but natural

- Steady growth of Stakeholder entities participation in the program which currently has crossed 63.
- From the initial 40/50 data layers, there has been an expansion of data clearing house to over 157 data layers.
- In terms of information provided, BSDI has shifted from a 2D static system to 3D Dynamic System. It is now more demand driven rather than being supply driven.
- With SDI available to wider user community outside the professional group and the demand for more diverse services for decision making, the BSDI initiative 2011 onward underwent a paradigm shift from "data-centric" focus to Service-centric" mode

BSDI Paradigm Shift

Data Centric

- Facilitate Access & Share Geospatial Data
- Technical Standards
- Institutional Policies
- Access Network
- Infrastructure Framework

Service Oriented

- Service Oriented Apps.
- Linked Services across Organization, Entities & Discipline.
- More effective crossorganization & interagency decision making in priority areas

Outreach

ArcGIS Online

A cloud-based system for mapping and geospatial content management. Users can log in, access their account, and make maps and apps. They can save, organize, and share these maps and apps, as well as other related geographic information.

Information Sharing & Community Outreach

- **General Public**
- Scientific, Engineering & Academic Community
- Local, Regional & Global Community

BSDI Strategic Objectives (2012 – 2016)

Project Title	Year of Completion					
Government organizations will be 'Spatially Enabled'.	2012					
Fully operational SDI database satisfying Public & Private Sector end users.	2012					
Increase the role of the Private Sector in the Geospatial domain.	2013					
Operational cost recovery (about 40%).	2014					
New Bahraini citizens qualified graduates to supplement market needs in GIS .	2016					

10100

Application Implementation

Ministry of Social Development

Ministry of Islamic Affairs

General Organization for Youth & Sport (GOYS)

Ministry of Education

Ministry of Labor

The Royal Charity Organization

Ministry of Health

National Wayleave System

Ministry of Housing

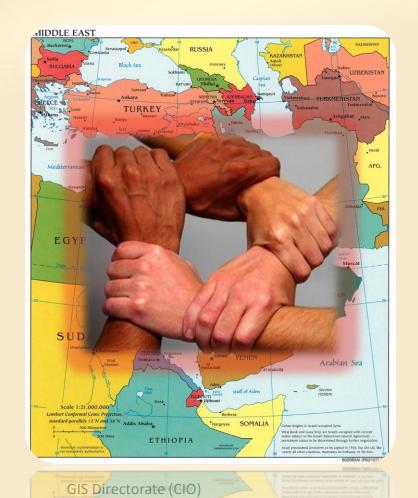

Ministry of Information

Bahrain Internet Exchange (BIX)

Regional Cooperation Initiative

Regional Cooperation Initiative

- CIO initiated in 2008 SDI at Regional level for GCC Countries.
- GIS Directorate, CIO, glad to take up the initiative to coordinate and setting up SDI at a regional level (GCC & Middle EAST).

Thank you
