At long: 148.0484, lat: -28.66915

- Times this location was observed clearly: 474
- Times that water was indicated at this location: 374
- Percent of time that water was observed at this location: 78.9%
- Confidence that the water observation at this location is correct: 99%

The detailed water observation values can be seen:

- [As CSV values](#)
- [As a graph](#)

Tracking development conditions

Some prototyped applications for the data cube:

- Vegetation change, agricultural production
- Flood inundation mapping, farm dam development
- Wetland management and characterisation
- Carbon accounting
- Seagrass and substrate mapping
- Coastal change and water quality
- Shallow water bathymetry
- Mining footprint and urban development
- Bushfire scar mapping and forestry inventory

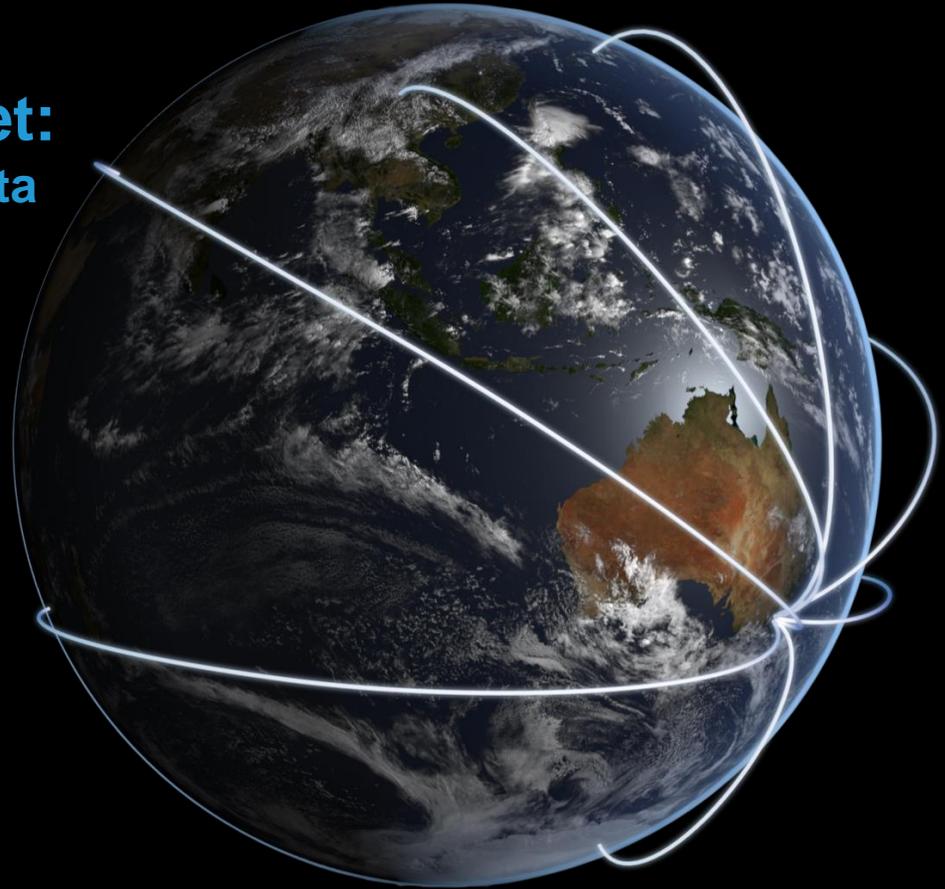

Big Data for a Big Planet: a global network of regional data cubes?

Data Cubes for:

Africa, Antarctica, South
America, Europe, North
America, ...

Connecting the EO, Spatial and Statistical
world to support global SDGs?

Open source code
Built with open data
Built with open standards
