The long and short of it all

- Without repeatability in sustainable practices, there is no true mitigation of risk
 - Repeatability is ensured with use of standard practices
 - Standard practices require engagement with stakeholders
 - Engagement with stakeholders requires fit-for-purpose solutions more often than one size fits all

Where we as a community are awesome

- Without repeatability in sustainable practices, there is no true mitigation of risk
 - **Repeatability is ensured with use of standard practices**
 - Standard practices require engagement with stakeholders
 - Engagement with stakeholders requires fit-for-purpose solutions more often than one size fits all

Where we as a community are competent

- **Without repeatability in sustainable practices, there is no true mitigation of risk**

– Repeatability is ensured with use of standard practices

- **Standard practices require engagement with stakeholders**

– Engagement with stakeholders requires fit-for-purpose solutions more often than one size fits all

Where we as a community are struggling

- Without repeatability in sustainable practices, there is no true mitigation of risk
 - Repeatability is ensured with use of standard practices
 - Standard practices require engagement with stakeholders
 - **Engagement with stakeholders requires fit-for-purpose solutions more often than one size fits all**

Plan vs. reality
