## Determine how much cultivated area under a specific crop to create detailed crop inventories

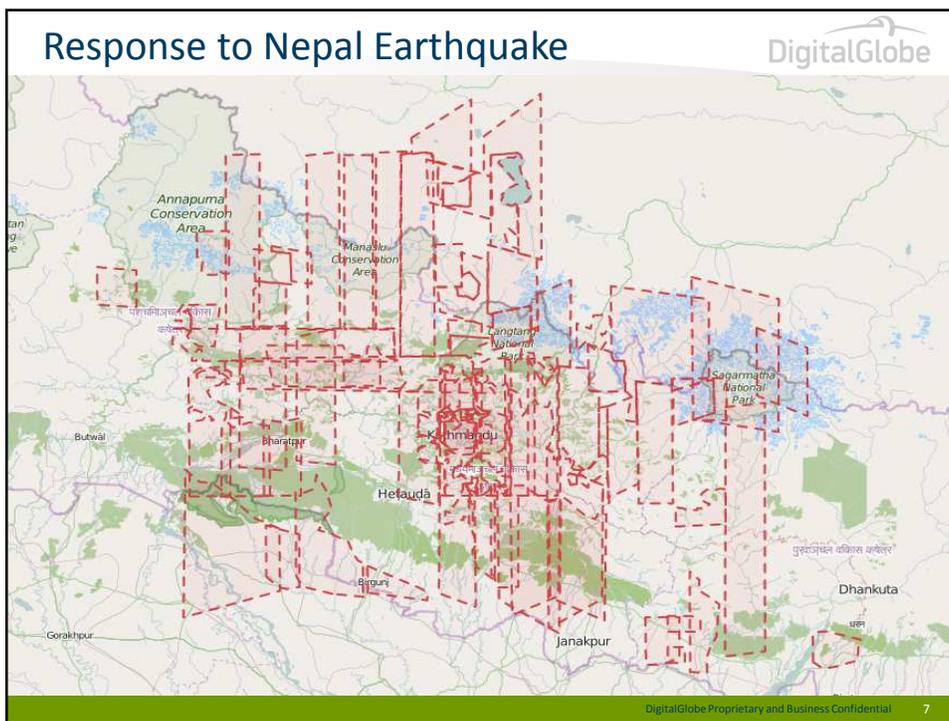

May 11 2011 | May 15 2012 | April 30 2013

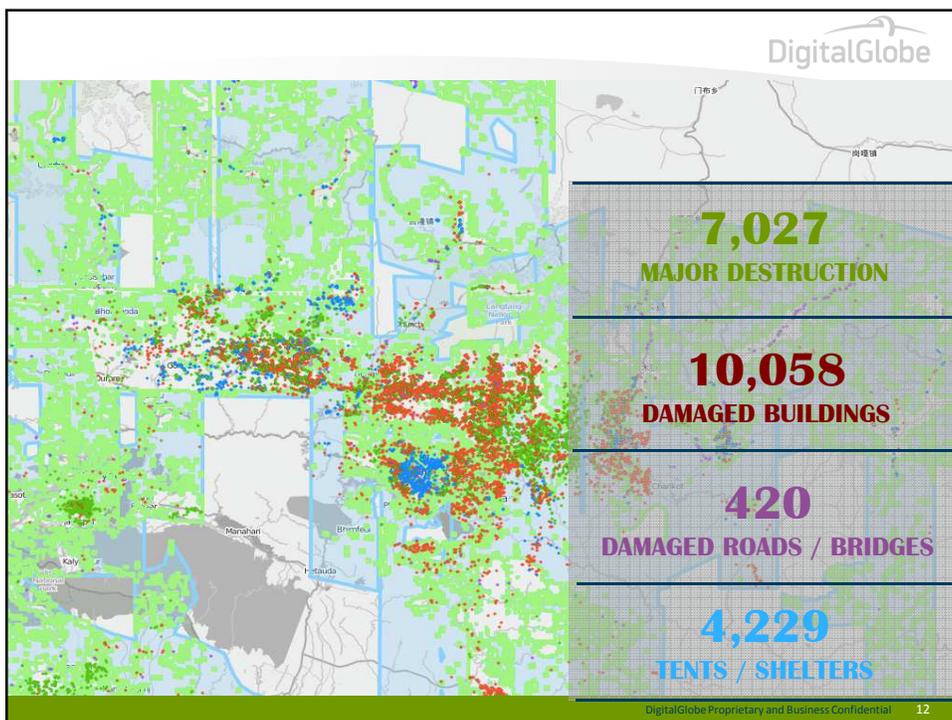

When supplemented by groundtruthing, imagery and analytics can create highly localized crop inventory maps.

## Rationale and Benefits of Public-Private Partnerships

- Defining policies for new technology introduction with inputs from commercial private partners (e.g. 30cm resolution relaxation with 40cm approval in 3 months)
- Mid-term to long-term commercial commitments to support private industry success in bringing innovation and new technologies at a faster pace.
- Becoming integral part of public sector mission and helping gain workflow efficiencies and focus on specific missions (keeping the sensitive missions by public sector).
- Significant Cost savings
- Mutual interest in delivering performance and value
