

Natural Resources Investigation and Territorial Spatial Governance Panel

Mika-Petteri Törhönen

 **Global Lead on Land**

Natural Resources inventorying, valuing, monitoring

Land and natural resources tenure

Land & natural resources records and geospatial data

Records integration, standardization

Remote sensing, geospatial analysis

Land use monitoring, integrated spatial planning

Climate change, climate actions

Biodiversity loss, carbon sequestration

Carrying capacity, suitability

Nature conservation, landscapes management

Adaptation, resilience

Mitigation, land use change

Quality

Currency

Interoperationality

Coverage

Data sharing, access

Tenure security and integrated land and natural resources records and geospatial information systems form the critical foundation and operational platforms for efficient inventorying, monitoring, conservation, and improvement of natural resources, as well as to the balanced territorial development.

Thank you for listening
