

**Committee of Experts on Global Geospatial
Information Management**

Tenth session

New York, 26- 27 August 2020 and 4 September 2020

Item 11 of the agenda

**Marine geospatial information
(for discussion and decision)**

Statement provided by:

P.R.China

Statement:

Thanks to the Working Group for its contribution to the availability and interoperability of marine geospatial data. We also acknowledge the white paper on marine geospatial information prepared by the WG. As a member of the WG, China attaches great importance to the management of marine geospatial information, and will actively participate in GEBCO, Seabed2030 and other international organizations/programs to promote the standardization and sharing of marine geospatial data according to the goals set by the WG.

Meanwhile, it is suggested that the WG should further strengthen its cooperation with more international organizations to enlarge the data types and get more marine geospatial information, such as IOC, focusing on its ocean observation network, ocean data system, etc. In addition, the integration in data standards, data use cases and data operability of terrestrial and marine geospatial information should be further addressed.
