

Committee of Experts on Global Geospatial Information Management

Eleventh session

New York, 23, 24 and 27 August 2021

Item 13 of the agenda

Implementation and adoption of standards for the global geospatial information community (for discussion and decision)

<i>Statement provided by:</i> Open Geospatial Consortium	
<i>Statement:</i> On behalf of the Open Geospatial Consortium, I want to note our appreciation of the collaboration with ISO TC/211 and IHO on the development of standards that support Findable Accessible Interoperable and Reusable geospatial information – critical for the preparation of Decision-ready information during disasters. Under the leadership of USGS, Natural Resources Canada and NASA, our global community is connecting the pieces in a multi-vendor Disaster Resilience pilot. The goal of this pilot is to create standards-based automated processes for creating Analysis-Ready Data and Decision-Ready Information to speed response to major disasters such as flooding, landslides and pandemic / health emergencies. I invite you to engage in our Disaster Pilot Stakeholder Community Coordination Group to ensure the outcomes of the OGC Disaster Pilot address your requirements and can be implemented operationally worldwide.	
Submitted on:	Orally delivered at the 2 nd Meeting on 24 August 2021
