

**Committee of Experts on Global Geospatial
Information Management**

Eleventh session

New York, 23, 24 and 27 August 2021

Item 13 of the agenda

**Implementation and adoption of standards for the global geospatial information community
(for discussion and decision)**

<i>Statement provided by:</i> GERMANY	
<i>Statement:</i> GERMANY appreciates the current activities of the mentioned standardization organizations, especially the development of new and easy implementable standards and technologies. Together with the new domain standards, such as recently developed ISO-standards, the proposed actions will significantly support the UN Implementation Guide of the Integrated Geospatial Information Framework (IGIF). GERMANY supports the proposed third edition of the Standards Guide with the case studies and a clear implementation strategy as a living document. This Guide will help to provide and seamlessly integrate our data, services and systems within the national geospatial information management based on flexible and innovative technology. This guide should be made available for the public on a website as soon as possible. Therefore, the link to the several appendices should not be google documents, since access to them is restricted. GERMANY appreciates the clear focus of the proposed standards and current activities on the Sustainable Developments Goals (SDG). This approach will foster the use of international standards in supporting the SDGs. Thank you. Working Committee of the Surveying Authorities of the Laender of the Federal Republic of Germany (AdV)
