

Committee of Experts on Global Geospatial Information Management

Eleventh session

New York, 23, 24 and 27 August 2021

Item 10 of the agenda

Geospatial information and services for disasters (for discussion and decision)

Statement provided by:

MEXICO

Statement:

- Mexico considers that the present COVID-19 pandemic has shown the importance of having available geospatial information in several issues; like the distribution of the disease at different times and regions, as well as to understand several factors in its spread at long term.
- Mexico recognizes that collaboration and communication between complementary working groups and other agencies and organizations from national to international bodies is essential for the creation of synergies.
- Mexico recognizes that earth observation data is an essential component of the geospatial information needed to support the analysis for disaster risk reduction, as well as the assessment of its effects. Therefore, more and improved geospatial and earth observation data is needed, as well as the proper tools to process and analyse growing amounts of information.
