Committee of Experts on Global Geospatial Information Management

Eleventh session

New York, 23, 24 and 27 August 2021 Item 13 of the agenda Implementation and adoption of standards for the global geospatial information community (for discussion and decision)

Statement provided by: MEXICO

Statement:

- Mexico recognizes and promotes the work of the International Hydrographic Organization (IHO) on the S-100 Universal Hydrographic Data Model to support cartographic institutions in the creation and maintenance of interoperable maritime data product specifications that comply with the ISO 19100 series of geographic information standards.
- Mexico supports the development of International Organization for Standardization (ISO) in the field of digital geographic information, as well as the use of the new ISO 19152, ISO 19144 and ISO 19160 standards on territorial administration, land coverage and addressing.
- Mexico recognizes the work undertaken by the Open Geospatial Consortium (OGC) regarding the development of standards based on application programming interfaces for the integration of geospatial information with statistics and other types of data, which will improve the access and integration of location information related to earth observations for response to disasters, health, environment, and climate change.
- In relation to the pandemic caused by Covid-19, Mexico recognizes and promotes the use of standards that allow having geostatistical, interoperable, and timely information that allows the focus of attention to be precisely located.
