

Committee of Experts on Global Geospatial Information Management

Eleventh session

New York, 23, 24 and 27 August 2021

Item 13 of the agenda

Implementation and adoption of standards for the global geospatial information community (for discussion and decision)

<i>Statement provided by:</i> Sweden	
<i>Statement:</i> Click or tap here to enter text. Sweden notes and welcomes the report presented to the Committee, and acknowledges the good work done by the Technical Committee 211 of the International Organization for Standardization, the Open Geospatial Consortium, and the International Hydrographic Organization, in supporting the Sustainable Development Goals. Sweden takes an active part in standardization by hosting the secretariat and chair of the ISO/TC 211. We would like to encourage other Member States to participate in the work of the Standards organizations. Furthermore, Sweden appreciates the revision of the Standards Guide and the development of the user story collection to support the implementation of IGIF, OGC's work to develop open API standards, ISO TC211's development of ISO19152 Land Administration Domain Model (LADM), ISO19144 Land cover and ISO19160 Addresses and IHO's work with the S-100 framework (marine data product specifications) as well as the increased use of ISO Geodetic Register. Sweden views positively the good co-operation between the standardization organizations. Sweden appreciates the efforts done within the standards development organizations to support the fight against COVID-19.
