

## Committee of Experts on Global Geospatial Information Management

### Eleventh session

New York, 23, 24 and 27 August 2021

Item 8 of the agenda

### Integration of geospatial, statistical and other related information (for discussion and decision)

<i>Statement provided by:</i> MEXICO	
<i>Statement:</i>	
<p>- Mexico thinks that the documentation of the best practices of the countries in the application of the Global Geospatial Statistical Framework and the experiences that emerged during the pandemic regarding the importance of integrating statistical information related to health issues such as COVID comorbidities, hospital infrastructure, among others, will undoubtedly guide the other countries towards their best implementation.</p> <p>- In the case of Mexico, the usefulness of the Global Statistical Geospatial Framework was revealed for the integration of the statistical information collected during the 2020 Population and Housing Census (CPV 2020) into its geospatial information, in the stages of planning, survey collection, processing and dissemination of results.</p> <p>- The Geostatistical Framework corresponding to the 2020 census round is available at the National Institute of Statistics and Geography (INEGI) website for the use of different users and information integration purposes, including the 2030 agenda for sustainable development.</p> <p>-INEGI is taking advantage of geospatial view developed by the HLG-MOS in the review of its legal framework for the implementation of the GSBPM; the GEOGSBPM has been useful to make some clarifications that favor quality in the integration of geospatial and statistical information.</p>
