GEOAI Skill Needs Survey – Private Sector

- By Lokendra Chauhan
Founder, Qen Labs Inc.

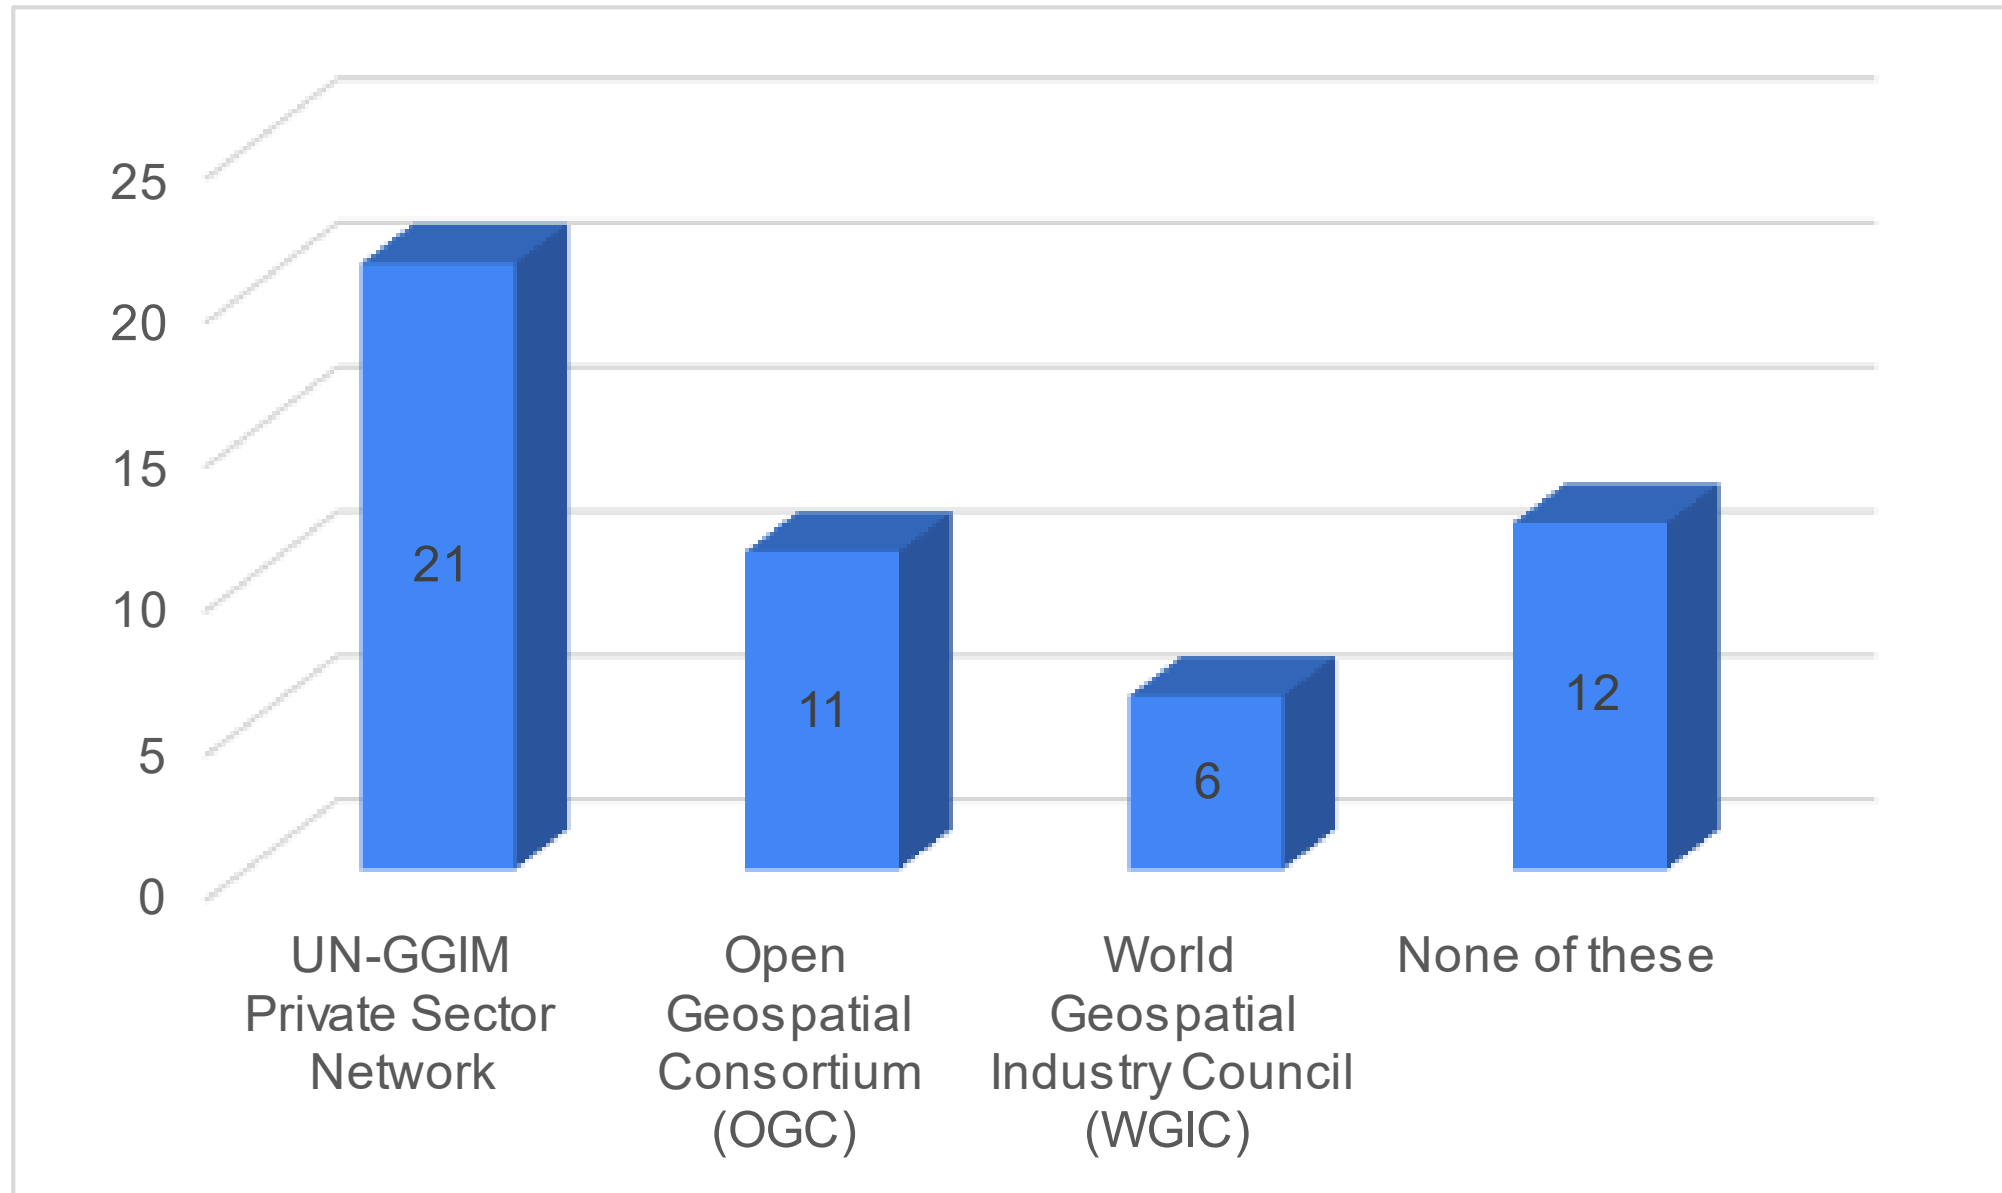

What is GeoAI

Definition: GeoAI is the amalgamation of artificial intelligence (AI) with spatial computing to develop a better understanding of the physical world around us at the levels of an individual, communities, cities, nations, and the planet using geospatial data.

Geographical Representation

GEOAI Survey – Association Memberships

Findings from Private Sector Survey

GeoAI Capabilities

■ Lack GeoAI Talent ■ Good GeoAI capabilities

Upskilling Plans

■ Upskilling employees ■ Difficult to recruit

Findings from Private Sector Survey

Do University Graduates have Required Skills for GeoAI Jobs?

Easier to upskill Geo degree holders or Computer Science

Findings: Skillsets sought

Findings from Private Sector Survey

Almost Unanimous Agreement on

AI & geo skills requirements – both foundational and analytical

Keeping-up with scientific and tech advances in GeoAI research

95%

- e-Learning resources/Just in time training
- Social media based knowledge management
- Standards Group for GeoAI

Community Resource Needs

■ GeoAI Hub ■ e-Learning ■ Other ideas

Skills and Competencies Required

GEO AI Solutions

Geospatial Science

- GIS e.g. ArcGIS, QGIS, etc.
- Spatial Databases e.g. PostGIS, Oracle Spatial, H3
- Spatial data science
- Remote sensing (raster), vector & point cloud data analysis

Artificial Intelligence

- Machine learning: SVM, regression, clustering, PCA
- Deep learning: CNNs, Transformers
- Graph analysis: GNN
- Math: linear algebra, stats, probability, calculus, etc.

Domain Knowledge

- Data structure and data selection
- Model architecture design
- Loss function design to ensure models learn the right thing

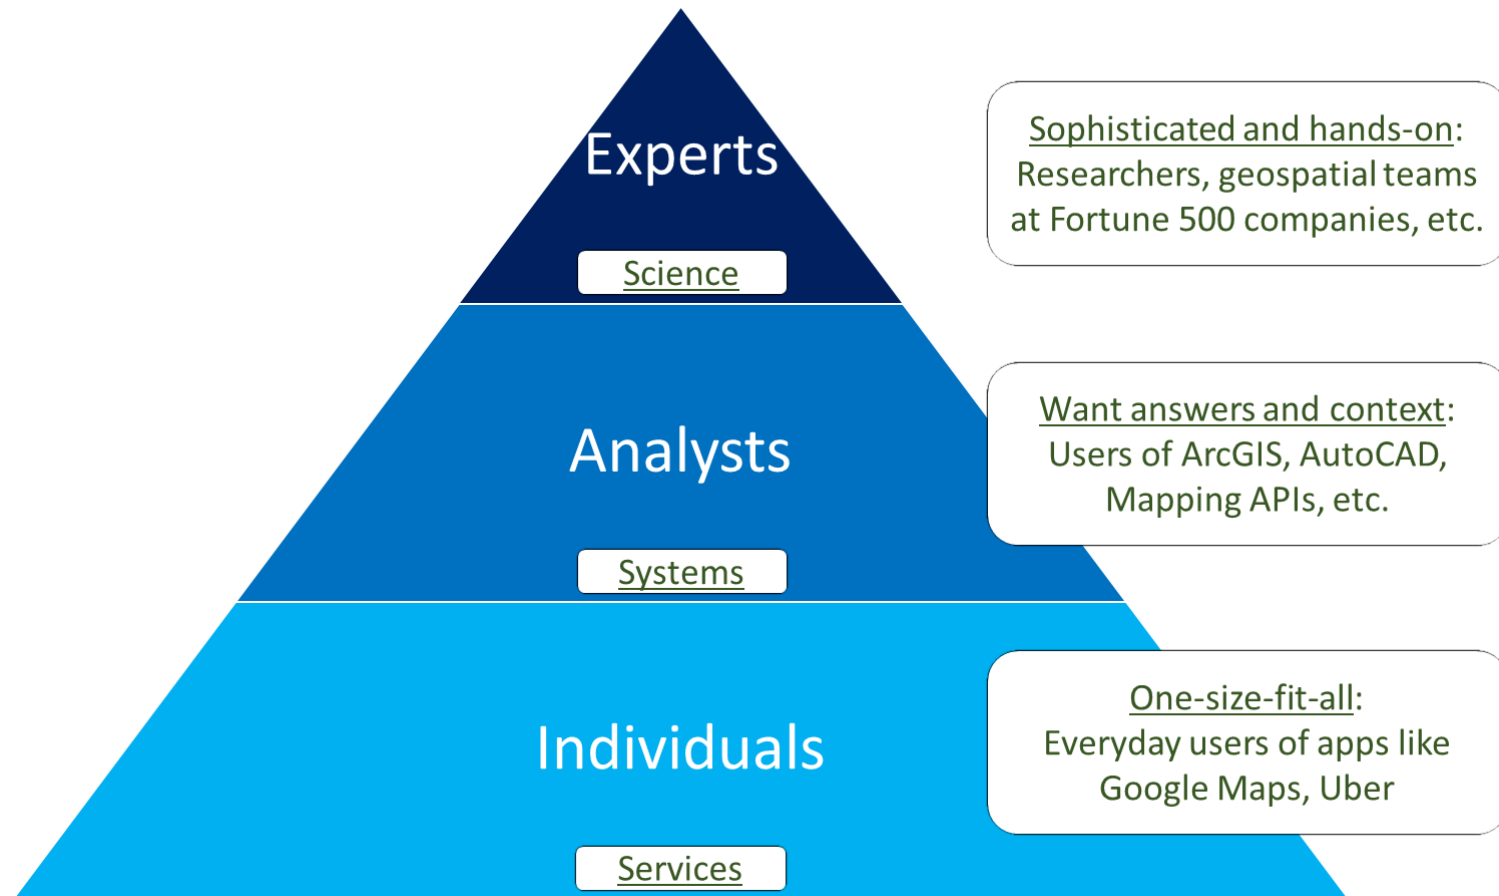

Computational Skills

- Python, JavaScript, PyTorch, API development, container management and cloud deployment skills
- Data engineering and management: Querying, processing, fusion/harmonization,

Ethics and Safety Considerations

- Know and tackle biases due to geographical data availability (or lack), scale, problem selection, etc.
- Manage data privacy issues through consent, self-determination and subsidiarity in data governance

Hierarchy of Geospatial Users

Next phase: Multimodal GeoAI foundation models (FM) for answering spatiotemporal and retrieval queries in natural language.

Question: When everyone becomes a GeoAI FM user, what kind curriculums would be required?

Questions
