

# GeoAI Best Practices and Mapping Disaster Resilience

---

*Andrea Manara*

International Telecommunication Union

UN GGIM 2025 –side event  
The evolving digital landscape

4 August 2025

# Agenda

- AI for Good Global Platform
  - Highlight from July 2025 Summit
- GeoAI activities and best practices
  - GeoAI Discovery channel
  - GeoAI Challenges
- Global Initiative on Resilience to Natural Hazards through AI Solutions
- Outlook

**THE leading action-oriented,  
global & inclusive United Nations  
platform on AI**

**ALL YEAR, ALWAYS ONLINE**

Organizer

53 UN Orgs

Co-convener

# AI for Good | AI for Good Global Summit 2025 – Key Highlights

## ✓ Global Participation

- 11,000+ attendees from 169 countries.
- Focus: AI governance, skills, and standards.

## ✓ Skills for All

- ITU AI skills coalition
- Goal: Train **10,000 people** (priority: developing nations).

## ✓ AI Governance Dialogue

- Co-chaired by UAE & France → **inclusive AI policies**.
- Co-chairs' summary report calls for AI that bridges innovation, inclusion, and sustainability

## ✓ Standards & Impact

-  AI for Food Systems (with FAO/WFP).
-  Deepfake detection standards (ITU/ISO/IEC).
-  AI Standards Database (global collaboration).

# AI for Good | AI for Good Global Summit 2025 – Key Highlights

## GeoAI workshop

July 9<sup>th</sup> 14:00 - 17:30

The role of GeoAI and Foundational Models in shaping an AI-driven future for all

- Session 1: GeoAI Applications
- Session 2: Geospatial Foundation Models
- GeoAI Challenges

**Gianfranco Basile**

Master Thesis Student, IBM Research – Europe

**Michele Melchiorri**

Project Officer, European Commission Joint Research Centre

**Ravi Shankar Santhana Gopala Krishnan**

Head, WHO GIS Centre for Health, Department of Delivery for Impact, World Health Organization (WHO)

**David Botha**

Counsellor, Study Group 3 ITU-R, International Telecommunication Union (ITU)

**Ingrid Vanden Berghe**

General administrator, National Geographic Institute

**Valerio Marsocci**

Internal Research Fellow, Φ-lab, European Space Agency (ESA)

**Sabrina Ricci**

AI Ecosystem Coordinator, Φ-lab, European Space Agency (ESA)

**Lorenzo Nava**

Research Associate in Multihazard Remote Sensing, University of Cambridge

**Michael Gould**

Global Education Manager, Esri

**Yifang Ban**

Professor and Director of the Division of Geoinformatics, KTH Royal Institute of Technology

**Tiziana Bonapace**

Director ICT and Disaster Risk Reduction Division, United Nations Economic and Social Commission for Asia and the Pacific (UN ESCAP)

**Céline Rozenblat**

Professor of Urban Geography, University of Lausanne

**Hamid Mehmood**

Head of the UN-SPIDER Beijing Office, United Nations Office for Outer Space Affairs (UNOOSA)

**Ali Mansourian**

Professor, Lund University

**Songnian Li**

Professor, Toronto Metropolitan University

**Pengyu Hao**

IT Officer, Food and Agriculture Organization of the United Nations (FAO)

**Andrea Manara**

System Analyst/Geospatial Focal Point, International Telecommunication Union (ITU)

**Maria Antonia Brovelli**

Professor, Politecnico di Milano

# AI for Good | GeoAI activities

## GeoAI Discovery

Channel on GeoAI applications, highlighting its relevance to the Sustainable Development Goals.

**Curator: Maria Antonia Brovelli**  
Politecnico di Milano (UN GGIM AN Advisory Board, ISDE Vice President, ISPRS TC IV Vice President)

## GeoAI Challenge

Competitions aimed at providing solutions for collaboratively addressing real-world geospatial problems by applying AI and ML.

*Exploring GeoAI for Good: A journey through webinars, workshops and global challenges*

### Can you develop an accurate and cost-effective method for cropland mapping?

Remote sensing imagery has been widely used for cropland extent classification, but existing products still contain high levels of uncertainty, making them less useful. Machine learning and artificial intelligence can improve the accuracy of crop mapping and land cover classification using time-series satellite imagery. In this challenge, the focus is on cropland mapping in dry regions, where the primary challenge lies in distinguishing cropland from pastures and steppe land.

You are tasked with developing an accurate and cost-effective method for cropland mapping in two test regions (Fergana in Uzbekistan and Orenburg in Russia), both of which present the unique complexities of arid and semi-arid agricultural landscapes.

By participating, researchers and practitioners will contribute to the advancement of global cropland mapping, promoting a more precise and comprehensive understanding of agricultural landscapes.

# Focus Group on AI for Natural Disaster Management

**ITU/WMO/UNEP Focus Group on AI for Natural Disaster Management (FG-AI4NDM)** leveraged the ITU ICT expertise with natural disaster expertise from the WMO and UNEP.

#### Can you create a classification model to identify landslides?

Landslides, triggered by natural events like heavy rainfall and earthquakes, pose significant risks to lives, infrastructure, and the environment. Effective monitoring and mapping of landslides are crucial for mitigating these risks, guiding emergency responses, and supporting resilient infrastructure planning.

Using multi-source satellite data, you will work to create an accurate landslide detection model. This model should differentiate landslide-affected areas from unaffected regions, leveraging both optical imagery and Synthetic Aperture Radar (SAR) data. The provided datasets, sourced from Sentinel-1 and Sentinel-2, include RGB and near-infrared bands as well as SAR bands (VV and VH) captured pre- and post-event. These data can reveal landscape changes and offer a unique view of the terrain, combining visual and radar-based insights to detect surface alterations and other indicators of landslides.

While optical data is precise and interpretable, SAR data is invaluable in cloud-covered regions. Combining these datasets can improve detection accuracy, particularly in challenging conditions.

The objective of this challenge is to create a model that effectively leverages SAR for cloud-covered regions while prioritising optical data where available, enabling accurate and reliable landslide detection.

# Outlook

## ***Interested in participating in GeoAI for Good activities ?***

- Showcase innovative applications in the GeoAI Discovery Serie
  - Hands-on workshops
  - Geospatial Foundation Models
- Get involved with the ITU GeoAI Challenges!
  - Sponsor, Problem statement owner, Participant
