

Session “Strengthening National Geospatial Information Management in the Americas”

The Private Sector: Supporting & Strengthening National Geospatial Information Systems Development in The Americas

Wednesday, 21 November 2018

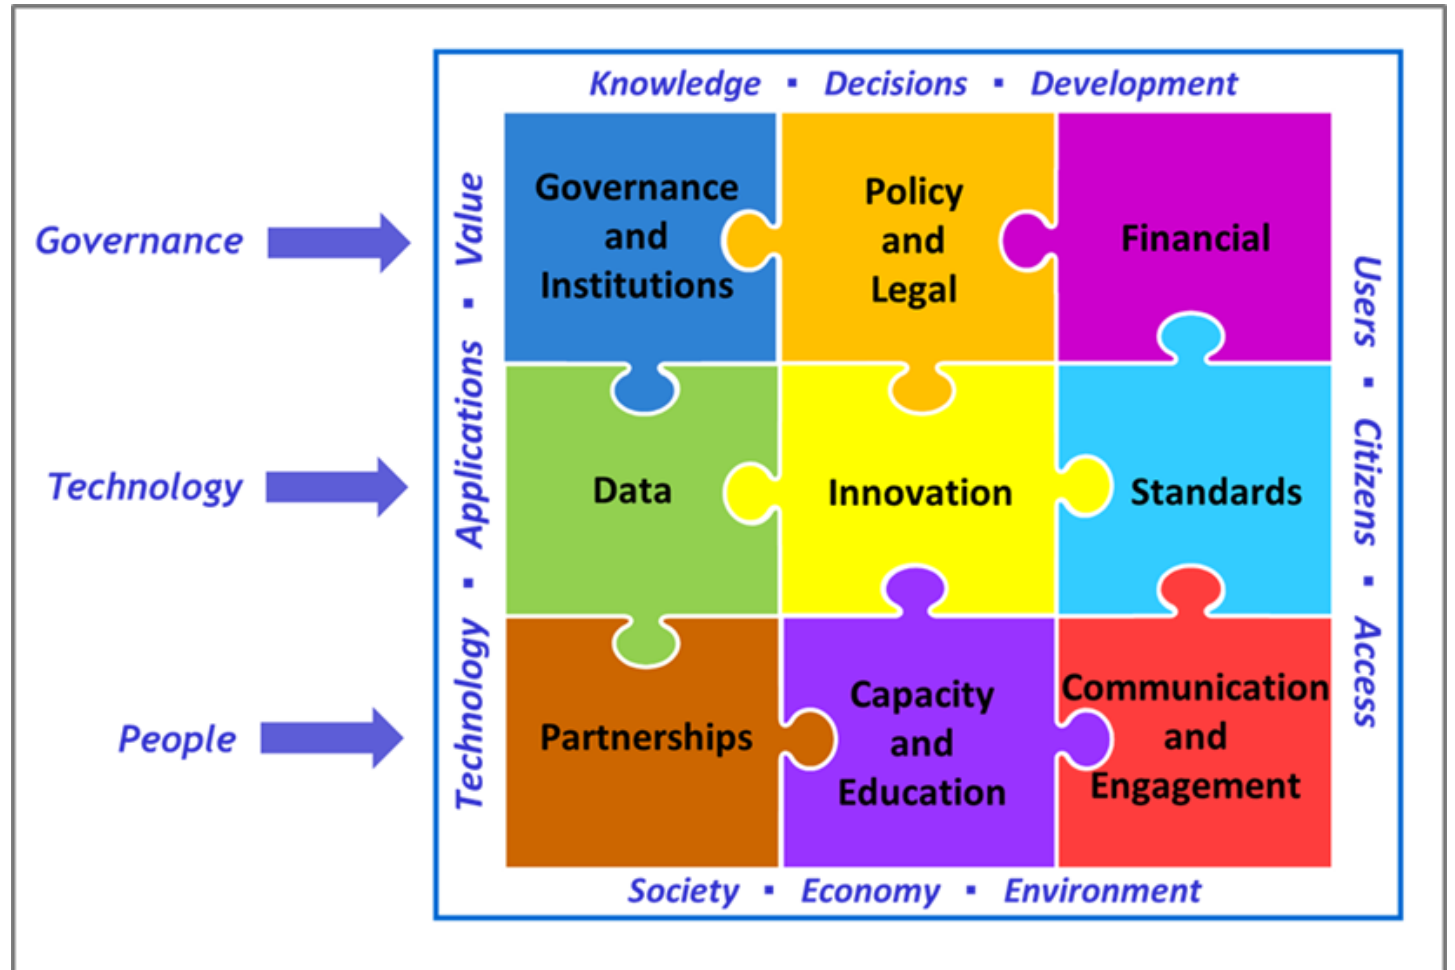

UNITED NATIONS
WORLD GEOSPATIAL INFORMATION CONGRESS

19 – 21 November 2018
Deqing, Zhejiang Province
China

Initial Thoughts....

- Collaborate to innovate
- Governments want to be more efficient, transparent and make wise decisions
- Geospatial is part of any countries overall infrastructure development. It is aiding economic development
- With Governments operating on razor thin budgets Public-Private Partnership can provide an economical, long-term solution

Source: IGIF Strategic Framework, 2018

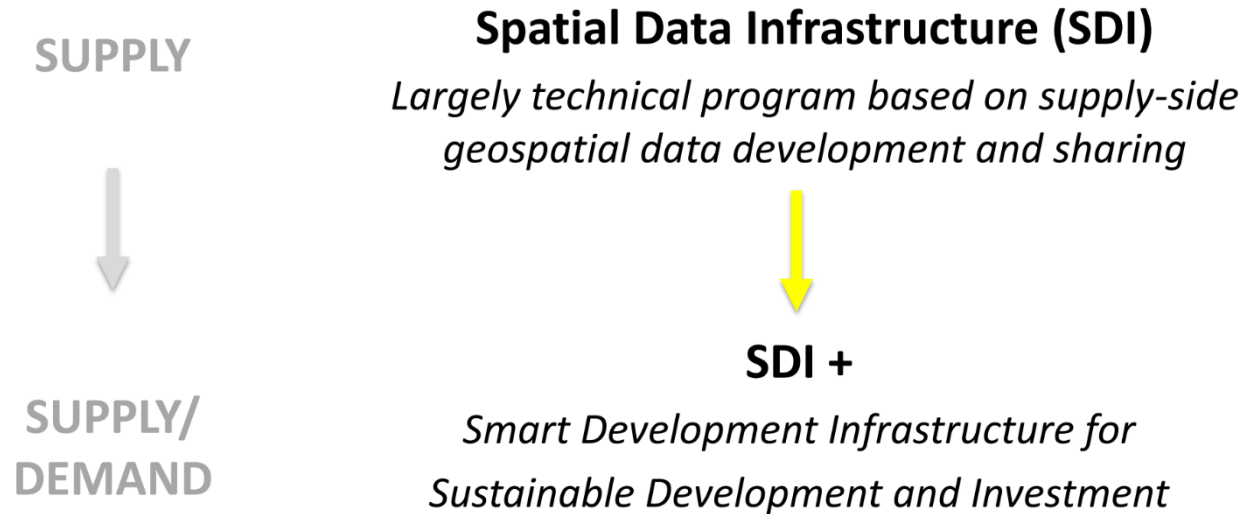

SDI.... A different approach

- Focusing on the actual near to medium term work to be accomplished and achieving real results is key to effective NSDI establishment and sustainability
- Country Priorities that leads to real outcomes
- Clarity in roles and responsibilities evolving systematically as organizations mature
- Effective connectivity among related activities and systems
- These SDIs must be initiative Driven – focused on common mission
- There are changing policy requirements by government

Introducing SDI+

Core Proposition

Source: Mark Sorenson

The Case of the Caribbean

- Governance
 - There is need to insulate from Political/Administrative Changes
 - Policy, Legislation, Executive Orders?
 - Institutional Arrangements
- The need for Authoritative Data
 - Accuracy – positional, attribute,
 - Logical consistency
 - Metadata
- Technology Infrastructure
- Human Resources
- Investment
- There must be a platform to easily share geospatial information and allow organizations to **collaborate**.

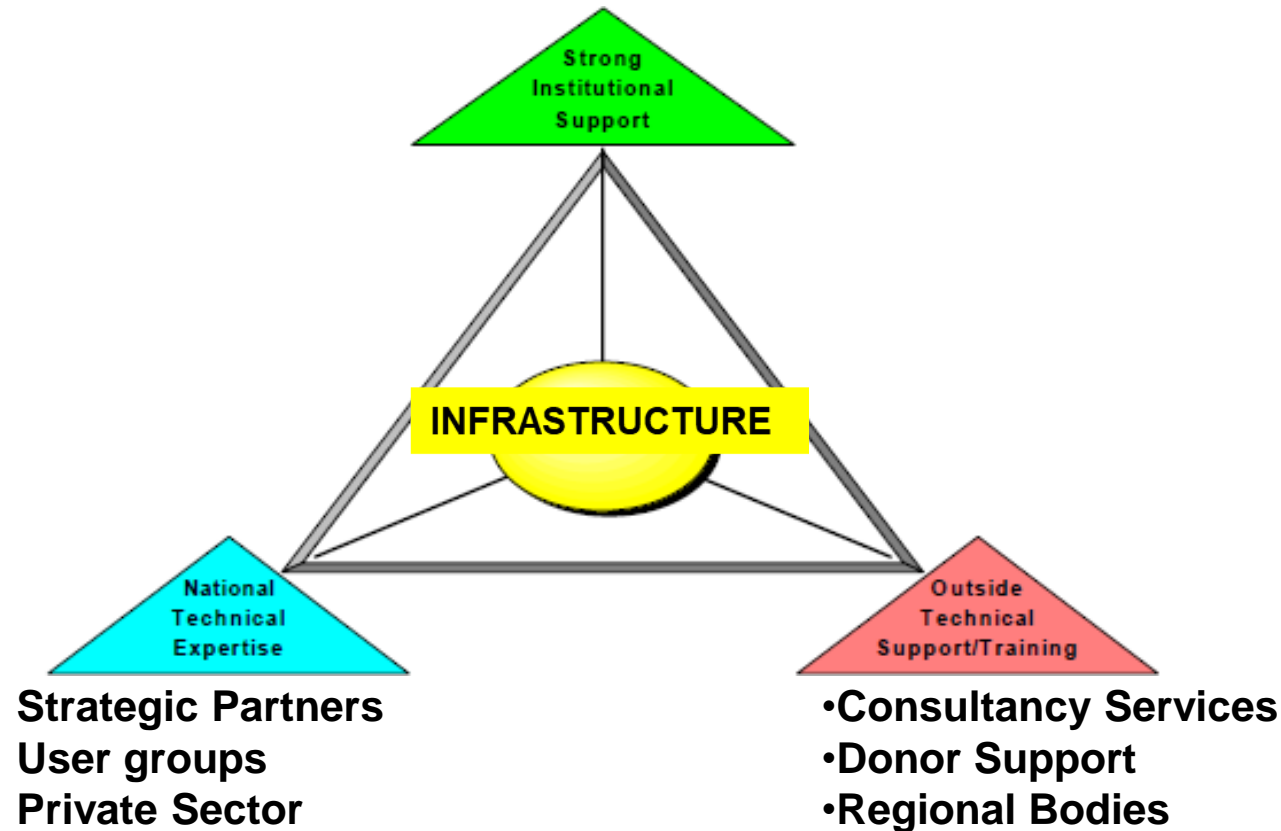

Collaboration

“No true efficiencies can be gained in Isolation”

VISION BASED ON THREE TIER APPROACH

Digital Transformation is Cultural Transformation

- Technology is a driver, but really it's main role is an enabler.
- The transformation has to occur in our organizational culture, our people and processes— everything that touches the customer and their interaction with the brand

Pillars of Growth

Transforming The Organization Requires

1

Moving Outside your Comfort Zone

Culture of Innovation

2

3

The Right Talent

Meeting User Needs

4

5

Starting Small

Engagement model for Success!

1. Discuss incorporating Specific Technology
2. Explore customer business model
3. Show Application demo

1. Understand Technology concepts e.g AR/VR, IOT, Blockchain
2. Get Hands on with Technology
3. Standard demo customization

1. Design Thinking workshop to define business challenge
2. Agile iterations incrementally build project functionality
3. Enterprise integration

1. Scale up pilot
2. Expand with value added services
3. Business Process Re-engineering
4. Systems Integration

Start small, grow quickly

17

Engage the Challenges of Change

- The Challenge is to Go Far beyond What we do today
- The future is DIGITAL
- We're on the verge of something special – there are opportunities galore
- Move from selling products to solutions
- Creating real value to our customers
- Growth lies in Syncing with industry trends
- Understanding the value of location
- Create a company culture & DNA that constantly push for innovation
- Recognize data as the new global currency- democratization
- New ways to find answers to Old problems
- Democratizing Technology
- Managing Human Interoperability

My Hope...

- A national Geospatial Infrastructure
- Reliable Geodetic Infrastructure
- Open Standards and open data policy
- Aligned to global initiatives
- Human capital development
 - The relevant certification
- Opportunities for entrepreneurial innovation
- Public-private partnerships
- An enabling environment for effective sustainable development and investment
